

	i = Annual interest rate in decimal.		
	I = Amount of interest		
	t = Time in years		
COMPOUND INTEREST	The interest that accrues when earnings for each specified period of time added to the principal thus increasing the principal base on which subsequent interest is computed.  Formula for compound interest: $A_n = P(1+i)^n$ Where, i = Annual rate of interest $n = Number of conversion periods per year$ Interest = $A_n - P = P(1+i)^n - P$ $n = 1 + i + i + i + i + i + i + i + i + i +$		
EFFECTIVE RATE OF INTEREST	The effective interest rate can be computed directly by following formula: $E = (1 + i)^n - P$ Where E is the effective interest rate $i = \text{actual interest rate in decimal}$ $n = \text{number of conversation period}$		
FUTURE VALUE	Future value of a single cash flow can be computed by above formula. Replace A by future value (F) and P by single cash flow (C.F.) therefore $\mathbf{F} = \mathbf{C.F.} \ (1 + \mathbf{i})^{\mathbf{n}}$		
ANNUITY	Annuity can be defined as a sequence of periodic payments (or receipts) regularly over a specified period of time.		

# TYPES OF ANNUITY

OF AN ANNUITY DUE/ANNUITY IMMEDIATE	The present value P of the amount an due at the end of n period at the rate of i per interest period may be obtained by solving for P the below given equation $A_n = P(1+i)^n$		
PRESENT VALUE OF ANNUITY DUE OR ANNUITY IMMEDIATE	Present value of annuity due/immediate for n years is the same as an annuity regular for (n-1) years plus an initial receipt or payment in beginning of the period. Calculating the present value of annuity due involves two steps.  • Step 1: Compute the present value of annuity as if it were an annuity regular for one period short.  • Step 2: Add initial cash payment/ receipt to the step 1 value.		
SINKING FUND	It is the fund credited for a specified purpose by way of sequence of periodic payments over a time period at a specified interest rate. Interest is compounded at the end of every period. Size of the sinking fund deposit is computed from A = P.A(n, i)  Where A is the amount to be saved the periodic payment, in the payment period.		
	Leasing	Leasing is a financial arrangement under which the owner of the asset (lessor) allows the user of the asset (lessee) to use the asset for a defined period of time (lease period) for a consideration (lease rental) payable over a given period of time. This is a kind of taking an asset on rent	
ANNUITY APPLICATIONS	Capital Expenditure	Capital expenditure means purchasing on asset (which results in outflows of money) today in anticipation of benefits (cash inflow) which would flow across the life of the investment	
	Valuation of bond	A bond is a debt security in which the issuer owes the holder a debt and is obliged to repay the principal and interest. Bonds are generally issued for a fixed term longer than one year.	

# **Question 1**

How much interest will be earned on '2000 at 6 % simple interest for 2 years?

(a) 250

(b) 240

(c) 260

(d) 270

Answer: b

# **Explanation:**

Required interest amount is given by

 $I = P \times i \times t$ 

 $=2000 \times \frac{6}{100} \times 2$ 

= 240

#### **Question 2**

Sonata deposited 50,000 in a bank for two years with the interest rate of 5.5% p.a. how much interest would she earn?

(a) 550

(b) 55000

(c) 55 `

(d) 5500

#### Answer: d

#### **Explanation:**

Required interest amount is given by

 $I = P \times i \times t$ 

 $50000 \times \frac{5.5}{100} \times 2$ 

= 5500

#### **Question 3**

Sachin deposited 1, 00,000 in is bank for 2 years at simple interest rate of 6%. How much interest would be earn? How much would be the final value of deposit?

(a) 11200

(b) 1,12,000

(c) 124000

(d) 12400

#### **Answer: b**

#### **Explanation:**

i. required interest amount is given by

 $I = P \times it$ 

 $100000 \times \frac{6}{100} \times 2$ 

= 12,000

ii. Final value of deposit is given by

= A = P + I

=(1,00,000+12,000)

= 1, 12,000

### **Question 4**

Rohika invested 70,000 in a bank at the rate of 6.5% p.a. simple interest rate. He received 85,925 after the end of term. Find out the period for which sum was invested by Rahul.

(a) 3.5 years (c) 0.35 years

(b) 35 years (d) 36 years

Answer: a

# **Explanation:**

We know A = P (1 + it)

I.e. 
$$85925 = 70000(1 + \frac{6.5}{100} \times t)$$

$$\frac{85925}{70000} = \frac{100 + 6.5t}{100}$$

$$\frac{85925 \times 100}{70000} - 100 = 6.5t$$

$$22.75 = 6.5t$$

$$t = 3.5$$

$$= time = 3.5 years$$

### **Question5**

Kanti Devi deposited some amount in a bank for  $7 \frac{1}{2}$  years at the rate of 6% p.a. simple interest. Kanti Devi received '1, 01,500 at the end of the term. Compute initial deposit of kanti Devi initial deposit of kanti Devi

(a) 70000

(b) 7000

(c)70

(d) 700000

Answer: a

# **Explanation:**

We know, 
$$A = P(1+it)$$
  
i.e.  $101500 = P(1 + \frac{6}{100} \times \frac{15}{2})$   
 $1,01,500 = P[1 + \frac{45}{100}]$   
 $P = \frac{101500 \times 100}{145}$   
 $= 70,000$ 

Initial deposit of kanti Devi = 70,000

#### **Question 6**

Shila has a sum of 46,875 was lent out at simple interest at the end of 1 year 8 months the total amount was 50,000. Find the rate of interest percent per annum.

(a) 0.4%

(b) 4 %

(c) 40%

(d) 0.04%

Answer: b

#### **Explanation:**

We know A = P (1 + it)  
i.e.50, 000 = 46875(1+ i ×1 
$$\frac{8}{12}$$
)  
i = 0.04;  
Rate = 4%

#### **Ouestion 7**

What sum money will produce Heena 28,600 as an interest in 3 years and 3 months at 2.5% p.a. simple interest?

(a) 35200

(b) 352000

6262969699

(c) 32500

(d) 325000

Answer: b

**Explanation:** 

We know  $I = P \times i \times t$ 

i.e. 
$$28,600 = P \times \frac{2.5}{100} \times 3\frac{3}{12}$$

$$28600 = \frac{2.5}{100} p \times \frac{13}{4}$$

$$28600 = \frac{32.5}{400} p$$

$$P = \frac{28600 \times 400}{32.5}$$

$$28600 = \frac{32.5}{400}$$
p

$$P = \frac{28600 \times 400}{22.5}$$

=352000

3, 52,000 will produce 28,600 interests in 3 years and 3 months at 2.5%p.a. simple interest.

**Ouestion 8** 

In what time vansh will do 85,000 amount to 1, 57,675 at 4.5% p.a.?

(a) 9 years

(b) 91 years

(c) 19 years

(d) 1 year

Answer: c

**Explanation:** 

We know

$$A = P (1 + it)$$

$$157675 = 85000(1 + \frac{4.5}{100} \times t)$$

$$\frac{157675}{1} = \frac{100 + 4.5t}{1}$$

$$\frac{157675}{85000} = \frac{100 + 4.5t}{100}$$

$$4.5t = \left(\frac{157675}{85000} \times 100\right) - 100$$

$$t = \frac{85.5}{4.5} = t = 19$$

In 19 years 85,000 will amount to 1, 57,675 at 4.5% p.a. simple interest rate.

**Question 9** 

A sum of money doubles itself in 10 years. The number of years it would triple itself is:

(a) 25 years

(b) 20 years

(c) 15 years

(d) 18 years

**Answer: b** 

**Explanation:** 

Let the sum of money invested be P.

Then, amount = 2P

A = P (1+it)

$$2p = p \left(1 + r \times \frac{10}{100}\right)$$

$$2 = \frac{100+10}{100}$$

R=10%p.a.

Now, year be 20 years

**Question 10** 

A company establishes a sinking fund to provide for the payment of 2, 00,000 debt maturing in 20 years. Contribution to the fund is to be made at the end of every year. Find the amount of each annual deposit if interest is 5% per annum.

(a) 6142 (c) 6052 (b) 6049 (d) 6159

# **Answer: b**

# **Explanation:**

Let the annual deposit be A F.Y. =0 [(1+i)-1]<sup>n</sup> 2,00,000 = [(1+0.05)<sup>20</sup> - 1] 10,000 = a (1.6533)  $A = \frac{10000}{1.6533}$ A = 6049

#### **Question 11**

A machine worth 4, 90,740 is depreciated at 15% on its opening value each year. When its value would reduce to 2, 00,000:

(a) 5 years 6 months

(b) 5 years 7 months

(c) 5 years 5 months

(d) None

# Answer: a

# **Explanation:**

Amount = 2, 00,000 In case of depreciation A = P  $(1 - i)^t$ 2, 00,000 = 4, 90,740  $(1 - 0.15)^t$ 0.4075 =  $(0.85)^t$   $(0.85)^{.5.5}$  =  $(0.85)^t$ n = 5.5 or 5 years 6 months (approx.)

# **Ouestion 12**

A sum amount to 1,331 at a principal of 1,000 at 10% compounded annually; Find the time.

(a) 3.31 years

(b) 4 years

(c) 3 years

(d) 2 years

Answer: c

#### **Explanation:**

P = 1,000 A = 1,331 i = 0.10 Time = n years A = P (1+i)<sup>t</sup> 1331 = 1000 (1 + 0.10)<sup>t</sup> 1.331 = (1.10)<sup>t</sup> (1.10)<sup>3</sup> = (1.10)<sup>t</sup> n = 3

Therefore, Rs. 1,000 amounts to 1,331 at 10% p.a. C.I. in 3 year's

# **Ouestion 13**

If a sum triples in 15 years at simple rate of interest, the rate of interest per annum will be

6262969699

- (a) 13.0%
- (c) 1.33%

- (b) 13.33%
- (d) 13.66%

#### **Answer: b**

#### **Explanation:**

Let Principal P = P

Amount A = 3P

T = 15 years

S.I. = A-P

= 3P - P

= 2P

 $R = \frac{S.I. \times 100}{}$ 

 $R = \frac{2P \times 100}{P \times 15 \text{ Yrs.}}$ 

 $R = \frac{40}{3}$ 

= 13.33%

# **Ouestion 14**

# In what time will a sum of money double its y at 6.25 Simple interest?

(a) 5 years

(b) 12 years

(c) 8 years

(d) 16 years

#### Answer: d

# **Explanation:**

Let  $R = \frac{625}{100}$ . According to the question,

Amount = 2 (Principle)

A = 2P

S.I. = A - P

= 2P - P

= P

S.I. =  $\frac{P \times R \times T}{100}$  $P = \frac{P \times 625 \times T}{100}$ 

 $P = \frac{100 \times 100}{100 \times 100}$   $T = \frac{p \times 100 \times 100}{p \times 625}$ 

T = 16 Years

#### **Question 15**

### What principal will amount to 370 in 6 years at 8% p.a. at simple interest?

(a) 210

(b) 250

(c) 260

(d) 25

#### **Answer: b**

#### **Explanation:**

Given Amount (A) = 370, T = 6 yrs, R = 8% p.a.

Let 
$$P = x$$

$$SI = \frac{PRT}{100}$$

$$=\frac{8\times 6\times X}{100}$$

$$= \frac{100}{100}$$
S. I. =  $\frac{48X}{100}$ 

A = P + S.I.

6262969699

$$A = X + \frac{48X}{100}$$
$$370 = \frac{148X}{100}$$
$$X = \frac{370 \times 100}{148}$$
$$= 250$$

#### **Question 16**

2,000 is invested at annual rate o interest of 10%. What is the amount after two years if compounding is quarterly?

(a) 2420

(b) 2431

(c) 2436.80

(d) 2440.58

#### Answer: c

# **Explanation:**

$$n = 4 \times 2 = 8$$

$$i = \frac{0.1}{4} = 0.025$$

$$A_8 = 2,000 (1+0.025)^8$$

$$= 2,000 \times 1.2184$$

# **Question 17**

= 2,436.80

Determine the compound amount and compound interest on 1000 at 6% compounded semi-annually for 6 years. Given that  $(1+i)^n = 1.42576$  for i=3% and n=2

(a) 425.76

(b) 425.67

(c) 851.52

(d) 851.25

#### Answer: a

# **Solution:**

Given:

Principal, P = Rs. 1,000

Rate of Interest = 6%

Time, = 6 years

And  $(1+i)^n = 1.42576$  for i = 3% and n = 12

We k now compound amount,  $A = P (1 + i)^n$ 

Since, the interest is compounded semi-annually for 6 years

Here,  $i = \frac{6}{2}\% = 3\%$  and  $n = 6 \times 2 = 12$ 

### **Compound Amount**

$$A = P(1+i)^n$$

$$= Rs. 1,000 (1 + 3\%)^{12}$$

$$= Rs. 1,000 \times 1.42576$$

= Rs. 1,425.76

Compound Interest = Rs. (1,425.76 - 1,000)

= Rs. 425.76

#### **Ouestion 18**

# 2000 is invested at annual rate of interest of 10%. What is the amount after two years if compounding is done monthly?

(a) 2420

(b) 2431

(c) 2436.80

(d) 244.058

#### Answer: d

# **Explanation:**

 $A_n = P (1 + i)^n$ 

 $n = 12 \times 2 = 24$ , i = 0.1/12 = 0.00833

 $A_{24}=2,00(1+0.00833)^{24}$ 

 $= 2.00 \times 1.22029$ 

= 2.44.058

#### **Question 19**

Which is a better investment 3% per year compounded monthly or 3.2% per year simple interest? Given that  $(1+0.0025)^{12} = 1.0304$ 

(a) 3.04%

(b) 3.4%

(c) 3.004%

(d) 4.03%

# Answer: a

# **Explanation:**

i = 3/12 = 0.25% = 0.0025

n=12

 $E = (1+i)^n - 1$ 

 $=(1+00025)^{12}-1$ 

= 1.0304 - 1 = 0.0304

= 3.04%

Effective rate of interest (E) being less than 3.2%. The simple interest 3.2% per year is the better investment.

#### **Question 20**

Bichara invest 3000 in a two-year investment that pays you 12% per annum. Calculate the future value of the investment.

(a) 3,763.20

(b) 376.320

(c) 37632.00

(d) 37.6320

#### Answer: a

#### **Explanation:**

We know  $F = C.F. (1 + i)^n$ 

Where F = Future value

C.F. = Cash flow = 3,000

i = rate of interest = 0.12

n = time period = 2

 $F = 3.000(1+0.12)^2$ 

 $= 3,000 \times 1.2544$ 

= 3,763.20

#### **Question 21**

As certain the compound value and compound interest of an amount of '75,000 at 8 percent compounded semiannually for 5 years.

(a) 30615

(b) 36051

(c) 36501

(d) 36015

#### Answer: d

# **Explanation:**

Computation of compound value and compound interest

Semiannual rate of interest (i) = 8/2 = 4%

$$n = 5 \times 2 = 10$$
,  $P = 75,000$ 

Compound value =  $P(1+i)^n$ 

 $= 75,000(1+4\%)^{10}$ 

 $= 75,000 \times 1.4802$ 

= 1, 11,015

Compound interest = 1, 11,015 - 75,000 = 36,015.

#### **Question 22**

A doctor is planning to buy an X – Ray machine for his hospital. He has two options. He can either purchase it by making cash payment of 5 lakhs or 6'15,000 are to be paid in six equal annual installments. Which option do you suggest to the doctor assuming the rate of return is 12 percent? Present value of annuity of Rs. 1 at 12 percent rate of discount for six years is 4.111

(a) 421378

(b) 412378

(c) 487321

(d) 421387

# Answer: a Explanation:

Option I:

Cash down payment = 5, 00,000

Option II:

Annual installment Basis

Annual installment =  $615000 \times \frac{1}{6} = 102500$ 

Present value of 1 to 6 installments @ 12%

 $= 1,02,500 \times 4.111$ 

=4,21,378

### **Question 23**

Calculate if '10,000 is invested at interest rate of 12% per annum, what is the amount after 3 years if the compounding of interest is done half yearly?

(a) 14049.28

(b) 14185.19

(c) 14857.61

(d) 14094.28

# Answer: b

# **Explanation:**

$$10,000 \left[ 1 + \frac{12}{100 \times 2} \right]^{3 \times 2}$$

$$10,000 \left( 1 + 0.06 \right)^{6}$$

$$= 10,000 \times 1.418519$$

$$= 14,185.19$$

#### **Question 24**

Present value " is the current value of a " Future Amount ". The statement is correct or not?

(a) Correct

(b) incorrect

(c) Not sure

(d) None

Answer: a

#### **Explanation:**

Present value "is the current value of a "Future Amount". It can also be defined as the amount to be invested today (present value) at a given rate over specified period to equal the "Future Amount".

#### **Question 25**

Simple interest may be defined as interest that is calculated as a simple percentage of the restricted amount is true or false?

(a) True (b) False (c) Partial (d) None

Answer: b Explanation:

Simple interest may be defined as interest that is calculated as a simple percentage of the original principal amount.

#### **Ouestion 26**

# Time value of money indicates that

- (a) A unit of money obtained today is worth more than a unit of money obtained in future
- (c) There is no difference in the value of money obtained today and tomorrow
- (b) A unit of money obtained today is worth less than a unit of money obtained in obtained in future
- (d) None of these

Answer: a Explanation:

A unit of money obtained today is worth more than a unit of money obtained in future.

#### **Ouestion 27**

# Time value of money supports the comparison of cash flows recorded at different time period by

(a) Discounting all cash flows to a common
 (b) Compounding all cash flows to a common point of time
 (c) Using either a or b
 (d) None of the above

Answer: c Explanation:

Time value of money supports the comparison of cash flows recorded at, different time period by discounting and compounding all cash flows to a common point of time.

# **Question 28**

#### Accounting financial management → liquidity decisions

(a) True (b) False (c) Partial (d) None

Answer: b Explanation:

False

It should be  $\rightarrow$  the controller's responsibilities are primarily – in nature, while the treasure's responsibilities are primarily related to this.

#### **Ouestion 29**

Richa borrowed a sum of Rs. 4800 from Ankita as a loan. She promised Ankita that she will pay it back in two equal installments. If the rate of interest be 5% per annum compounded annually, find the amount of each installment.

(a) 14049.28

(b) 2581.46

(c) 24857.61

(d) 14094.28

# Answer: b

# **Explanation:**

Given that principal value = 4800

Rate = 5%

Two equal installments annually = 2 years

Applying the formula,  $P = X/(1+r/100)^n$  ......X/(1+r/100)

So, we have here two equal installments.

 $P=X/(1+r/100)^2 + X/(1+r/100)$ 

 $4800=X/(1+5/100)^2+X/(1+5/100)$ 

On simplifying

We have x= Rs. 2581.46

So, the amount of each installment is Rs. 2581.46

#### **Question 30**

A builder borrows Rs. 2550 to be paid back with compound interest at the rate of 4% per annum by the end of 2 years in two equal yearly installments. How much will each installment be?

(a) Rs. 1352

(b) Rs. 1377

(c) Rs. 1275

(d) Rs. 1283

# Answer: a

# **Explanation:**

Amount = Rs. 2550

Rate = 4% per annum

Time = 2 years

Applying the formula

 $P= X/ (1+r/100)^{n+} ....X/ (1+r/100)$ 

Here we have two equal installments, so

$$P = \frac{1}{\left|1 + \frac{r}{100}\right|^2} + \frac{x}{\left|1 + \frac{4}{100}\right|}$$

#### = Rs. 1352

#### **Question 31**

A man buys a scooter on making a cash down payment of Rs. 16224 and promises to pay two more yearly installment of equivalent amount in next two years. If the rate of interest is 4% per annum, compounded yearly, the cash value of the scooter, is

(a) Rs. 40000

(b) Rs. 46824

(c) Rs. 46000

(d) Rs. 50000

# Answer: b

# **Explanation:**

Concept used in this question is: you need to calculate principal for every year unlike simple interest where principal used to be same for every year.

Let principal (present worth) for first year be P<sub>1</sub> and that for two years be P<sub>2</sub>

$$16224 = P_1 \left[ 1 + \frac{4}{100} \right]$$

6262969699

$$P_1 = \frac{16224 \times 25}{26} = \text{Rs. } 15600$$

Again, 
$$16224 = P_2 \left[ 1 + \frac{4}{100} \right]^2$$
  
 $P_2 = \frac{16224 \times 625}{676} = \text{Rs. } 15000$ 

The total payment will be (cash down payment + installment paid)

Cash value of the scooter

# **Question 32**

The populations of Chandigarh is increase at a rate of 1% for first year, it decrease at the rate of 4% for the second year and for third year it again increase at the rate of 5%. Then what will be the population of Chandigarh are 50000.

(a) Rs. 51006

(b) Rs. 50904

(c) Rs. 50836

(d) Rs. 51125

# **Answer: b Explanation:**

Since the rate growth of population is increasing first and then decreasing for the second year and again it increases for third year, then the population after T years will

$$50,000 \times \left[1 + \frac{1}{100}\right]^{1} \times \left[1 - \frac{4}{100}\right]^{1} \times \left[1 + \frac{5}{100}\right]^{1} = 50904$$

### **Question 33**

A person bought a new machine. The value of the machine is Rs. 10000. If rate of depreciation is 5 % per annum, then what will be the value of the machine after 2 vears?

(a) Rs. 9025

(b) Rs. 9044

(c) Rs. 9110

(d) Rs. 9080

#### Answer: a

### **Explanation:**

Here P = Rs. 10000

Rate of depreciation = 5%

T = 2 years

Therefore, the value after 2 years will be =  $P(1 - R/100)^{t}$ 

$$= 10,000 \left[ 1 - \frac{5}{100} \right]^2$$

$$= Rs 9025$$

= Rs. 9025.

#### **Ouestion 34**

A sum of Rs. 6600 was taken as a loan. This is to be repaid in two equal annual installments. If the rate of interest be 20% compounded annually then the value of each installment is

(a) Rs. 4320

(b) Rs.4400

(c) Rs. 2220

(d) Rs. 4420

# Answer: a **Explanation:**

Present worth of Rs. X due T years hence is given by Present worth (PW) = 
$$\frac{X}{\left(1 + \frac{R}{100}\right)^2}$$
 = 6600

6262969699

$$\frac{\frac{X}{\left(\frac{6}{5}\right)} + \frac{X}{\left(\frac{6}{5}\right)^2} = 6600}{\frac{5X}{6} + \frac{25X}{36}} = 6600$$
$$\frac{\frac{55X}{36}}{36} = 6600.$$
$$X = \frac{6600 \times 36}{55} = 4320$$

#### **Question 35**

Simple interest on a sum at 5% per annum for 2 years is Rs. 60. The compound interest on the same sum for the same period is

(a) Rs. 62.4

(b) Rs. 61.5

(c) Rs. 62

(d) Rs. 60.5

Answer: b

**Explanation:** 

Principal =  $\frac{100 \times SI}{RT}$  = Rs. 600

Compound interest =  $P(1 + \frac{R}{100})^T - P$ 

 $=600\left(1+\frac{5}{100}\right)^2-600$ 

= 661.5 - 600 = Rs. 61.5

# **Question** 36

What will be the amount if a sum of Rs. 10000 is placed at compound interest for 3 year while rate of interest for the first, second and third years is 2, 5 and 10 percent, respectively?

(a) 11781

(b) 11244

(c) 11231

(d) 11658

Answer: a

#### **Explanation:**

When rates are different for different years, say  $R_1$ %,  $R_2$ % and  $R_3$ % FOR  $1^{ST}$ ,  $2^{ND}$  and  $3^{rd}$  year respectively.

$$A = P\left(1 + \frac{R_1}{100}\right) \left(1 + \frac{R_2}{100}\right) \left(1 + \frac{R_3}{100}\right)$$

Amount after 3 years =  $10000 \left(1 + \frac{2}{100}\right) \left(1 + \frac{5}{100}\right) \left(1 + \frac{10}{100}\right)$ 

 $= 10000 \left(\frac{102}{100}\right) \left(\frac{105}{100}\right) \left(\frac{110}{100}\right)$   $\frac{102 \times 105 \times 11 \times}{10} = \text{Rs. } 11781$ 

#### **Question 37**

An electronic type writer worth Rs. 12000 deprecates @ 10% P.A. ultimately it was sold for Rs. 200. Estimate its effective life during which it was in use?

(a) 389

(b) 38.9

(c) 3.89

(d) None

**Answer: b** 

**Explanation:** 

200=12000× (90/100) ^n

 $1/60 = (9/10) ^n$ 

Apply log both sides, we get

 $Log(1/60) = n \times log(9/10)$ 

$$-1.7781 = n \times -0.0457$$
  
 $38.9 = n$ 

Value of type writer becomes 200 after 38.9 years.

# **Question 38**

# An annuity with an extended life is classified as

(a) extended life

(b) perpetuity

(c) deferred perpetuity

(d) due perpetuity

# Answer: b Explanation:

Perpetuity is a type of annuity that receives an infinite amount of periodic payments. An annuity is a financial instrument that pays consistent periodic payment. As with any annuity, the perpetuity value formula sums the present value of future cash flows.

#### **Ouestion39**

# Periodic rate if it is multiplied with per year number of compounding periods is called

(a) extrinsic rate of return

(b) intrinsic rate of return

(c) annual rate of return

(d) nominal annual rate

# **Answer: d Explanation:**

An interest rate is called **nominal** if the frequency o compounding (e.g. a month) is not identical to the basic time unit in which the **nominal rate** is quoted (normally a year).

# **Question 40**

A deposit of Rs. 100 is placed into a college fund at the beginning of every month for 10 years. The fund Earns 9% annual interest, compounded monthly, and paid at end of the month. How much is in the account right after the last deposit?

(a) 193751.43

(b) 11244.43

(c) 11231.67

(d) 61658.67

# Answer: a Explanation:

The value of the initial deposit is Rs. 100, so  $a_1 = 100$ . A total of 120 monthly deposits are made in the 10 years, so n = 120. To find r, divide the annual interest rate by 12 to find the monthly interest rate and add 1 to represent the new monthly deposit.

$$r = 1 + \frac{0.09}{12} = 1.0075$$

Substitute  $a_1$ =100, r = 1.0075

, and n = 120 into the formula for the sum of the first n terms of a geometric series, and simplify to find the value of the annuity.

$$S_{120} = \frac{100(1 - 1.0075^{120})}{1 - 1.0075}$$
$$= 19351.73$$

#### **Question 41**

Relationship between annual nominal rate of interest and annual effective rat6e of interest, if frequency of compounding is greater than one:

- (a) Effective rate>Nominal rate
- (b) Effective rate < Nominal rate
- (c) Effective rate = Nominal rate
- (d) None of the above

Answer: a

# **Explanation:**

Effective rate > Nominal rate

# PAST EXAMINATION QUESTIONS:

# **MAY 2018**

#### **Ouestion 1**

Mr. X invests Rs. 10,000 every year starting from today for next: 10 years suppose interest rate is 8% per annual compounded annually. Calculate future value of the annuity.

(a) Rs.1,56,454.88

(b) Rs. 1,56,554.88

(c) Rs. 1,44,865.625

(d) None

Answer: a

**Explanation:** Annual Installment (A) = 10,000

A = 10,000 A=? A = 8% p.a.c.i A = 10 years

Future value of Annuity due

 $A_{n,I} = \frac{A}{I} [(1+i)^n - 1] (1+i)$ 

 $\frac{10,000}{0.08} [(1+0.08)^{10} - 1](1+0.08)$   $\frac{10,000}{0.08} [(1.08)^{10} - 1](1+0.08)$ 

1, 56, 454.88

# **Question2**

How much amount is required to be invested every year so as to accumulate Rs. 3, 00, 000 at the end of 10 years, if interest is compounded annually at 10%?

(a) Rs. 18,823.65

(b) Rs. 18,000

(c) Rs. 18,828.65

(d) Rs. 18,882.65

Answer: a **Explanation:** 

Annuity (annual installment) = A

Future value  $A_{n,I} = 3,00,000$ 

R = 10%, n = 10 years

 $i = \frac{R}{100} = \frac{10}{100} = 0.1$ 

 $A_{n, i} = \frac{A}{I}[(1 + i)^n - 1]$ 

3,  $00,000 = \frac{A}{0.1}[(1+0.1)^{10}-1]$ 

 $= \frac{A}{0.1} [2.59374 - 1]$   $\frac{A}{0.1} \times 1.59374$ 

 $3,00,000 = A \times 15.9374$ 

 $A = \frac{3,00,000}{15.9374} = Rs. 18,823.65$ 

# **Ouestion 3**

If Rs. 1,000 be invested at interest rate of 5% and the interest is added to the principal every 10 years, then the number of years in which it will amount to Rs. 2,000 is

(a) 
$$16\frac{2}{3}$$
 years

(b) 
$$6\frac{1}{4}$$
 years

(d) 
$$6\frac{2}{3}$$
 years

#### Answer: a

# **Explanation:**

P=1,000, R = 5%p.a.s.i., T = 10 years 
$$SI = \frac{PRT}{100} = \frac{1000 \times 5 \times 10}{100} = 500$$
  
Amount after 10 years  $A = P + S$ . I. = 1,000 + 500 = 1,500  
Now after 10 years  $P = 1,500$ ,  $R = 5\%$  k = 2,000, T=?

$$S.I. = A-P$$

$$= 2,000 - 1,500$$

$$T = \frac{SI}{P \times R} = \frac{500 \times 100}{1500 \times 5} = \frac{20}{3} = 6\frac{2}{3} \text{ Years}$$

Total time taken = 10 years + 
$$6\frac{2}{3}$$
 years

$$=16\frac{2}{3}$$

# **Question 4**

A person borrows Rs. 5,000 for 2 years at 4% per annual simple interest. He immediately lends to another person at  $6\frac{1}{4}$ %. Per annual for 2 years find his gain in the transaction for

year:

#### **Answer: b**

# **Explanation:**

$$P = 5,000$$

$$R = 4\% \text{ p.a.s.i}$$

$$T = 2$$
 years

$$SI = \frac{PRT}{100} = \frac{5000 \times 4 \times 2}{100} = 400$$

#### Case - 2

$$P = 5,000$$

$$R = 6\frac{1}{4}\% = \frac{25}{4}\%$$
 p.a.s.i.

$$T = 2 \text{ Years}$$

$$SI = \frac{PRT}{100} = \frac{5000 \times 25}{100 \times 24} \times 2 = 625$$

His gain = 
$$625 - 400 = 225$$

# **Ouestion 5**

If an amount is kept at S.I. it earns an interest of Rs. 600 in first two years but when kept at compound interest it earns an interest of 660 for the same period, then the rate of interest and principal amount respectively are

- (a) 20%., Rs. 1,200
- (c) 10%, Rs. 1,200

- (b) 20%, Rs. 1,500
- (d) 10%, Rs. 1,500

#### **Answer: b**

#### **Explanation:**

Let 
$$P = X$$
,  $R = R$ ,  $T = 2$ ,  $S.I. = 600$ 

$$SI = \frac{PRT}{100}$$

$$SI = \frac{PRT}{100} = 600 = \frac{XR2}{100}$$

$$600 = \frac{100}{100}$$

$$XR = \frac{600 \times 100}{2}$$

$$XR = 30,000$$

$$X = \frac{30,000}{R} - \dots (1)$$

$$P = X$$
,  $R$ ,  $T = 2$ ,  $C.I = 660$ 

C.I. = P 
$$[(1 + \frac{R}{100})^2 - 1]$$

$$600 \left[ \frac{30,000}{R} \right] \left[ \left( 1 + \frac{R}{100} \right)^2 - (1)^2 \right]$$

$$600 \left[ \frac{30,000}{R} \right] \left[ \left( 1 + \frac{R}{100} + 1 \right) \left( 1 + \frac{R}{100} \right) - 1 \right]$$

C.I. = 
$$P[(1 + \frac{R}{100})^2 - 1]$$
  
 $600[\frac{30,000}{R}][(1 + \frac{R}{100})^2 - (1)^2]$   
 $600[\frac{30,000}{R}][(1 + \frac{R}{100} + 1)(1 + \frac{R}{100}) - 1]$   
 $600[\frac{30,000}{R}][(2 + \frac{R}{100} + 1)(1 + \frac{R}{100}) - 1]$   
 $[\frac{600}{300}] = 2 + [(\frac{R}{100})]$ 

$$\left[\frac{600}{300}\right] = 2 + \left[\left(\frac{R}{100}\right)\right]$$

$$\frac{R}{100} = \frac{600}{300} - 2$$

$$\frac{R}{100} = \frac{600}{300} - 2$$

$$\frac{R}{R} = \frac{600 \times 600}{1000}$$

$$\frac{100}{R} = \frac{300}{100}$$

$$\frac{}{100} = \frac{}{300}$$

$$\frac{100}{R} = \frac{300}{300}$$

$$R = \frac{60 \times 100}{300} = 20\%$$

Putting 
$$R = 20\%$$
 in

$$X = \frac{30,000}{20}$$

$$X = Rs. 1,500$$

Hence:

$$P = x = Rs. 1500$$

R = 20%p.a.

# **Question 6**

The future value of an annuity Rs. 1,000. Made annually for 5 year the interest of 14% compounded annually is:

(a) 5610

(b) 6610

(c) 6160

(d) 5160

#### **Answer: b**

### **Explanation:**

Given, Annuity (A) = t 1,000

$$R = 14\%$$

$$i = \frac{14}{100} = 0.14$$

Future value n = 5

$$A_{n, i} = \frac{A}{I} \lfloor (1+i)^n - 1 \rfloor$$

 $\frac{1000}{0.14}[(1+0.14)^5-1]$ 

 $\frac{\frac{1000}{0.14}}{\frac{1000}{0.14}}[1.92541 - 1]$   $\frac{\frac{1000}{0.14}}{0.14}[0.692541]$ Rs. 6,610

# **NOV 2018**

# **Ouestion 1**

If Rs. 10,000 is invested at 8% per year compound quarterly, then the value of the investment after 2 years is [given  $(1 + 0.2)^8 = 1.171$ ]

(a) 11,716.59

(b) 10,716.59

(c) 117.1659

(d) None

Answer: a

**Explanation:** 

Given P = 10,000, R =  $\frac{8\%}{4}$ 

R = 2% Quarterly

 $T = 2 \times 4 = 8Quarter$ 

Value of investment after 'T, years

A = P  $\left[1 + \frac{R}{100}\right]^T$   $10,000 \left[1 + \frac{2}{100}\right]^8$   $10,000 (1+0.02)^8$   $10,000 \times (1.02)^8$   $10,000 \times 1.171659$ 11,716.59

# **Question 2**

A bank pays 10% rate of interest; interest being calculated half yearly. A sum of Rs. 400 is deposited in the bank. The amount at the end of 1 year will be

(a) 440

(b) 439

(c) 441

(d) 442

Answer: a

**Explanation:** 

Given principal (P) = 400

R = 10%p.a.

T = 1 year

Amount after T years

 $A = P \left[ 1 + \frac{R}{100} \right]^{T}$   $= 400 \left[ 1 + \frac{10}{100} \right]^{1}$  = 400(1.1) = 440

#### **Question 3**

A Certain money doubles itself in 10 years. When deposited on simple interest. It would triple itself in \_\_\_\_\_

#### 6262969699

(a) 20 Years

(b) 15 years

(c) 25 years

(d) 30 years

# Answer: a

# **Explanation:**

#### Case - 1

Let Principal (P) = 100, Amount (A) = 200,

- R = ? T = 10 Years

- S. I. = A P
- = 200 100
- = 100
- $R = \frac{SI \times 100}{}$
- $P \times T$ 100×100
- 100×10
- R = 10%

# Case - II

Let Principal (P) = 100

Amount (A) = 300

(T) = 10 Years

S.I. = A-P

=300 - 100 = 200

 $T = \frac{SI \times 100}{}$ 

 $\frac{1 = \frac{1}{P \times R}}{\frac{200 \times 100}{100 \times 10}} = 20 \text{ Years}$ 

#### **SHORTCUT**

### **Ouestion4**

A man deposited t 8,000 in a bank for 3 years at 5% per annum compound interest, after 3 years he will get

(a) 8,800

(b) 9,261

(c) 9,200

(d) 9,000

# **Answer: b**

#### **Explanation:**

#### Given

- P = 8000
- R = 5% p.a.
- T = 3 years

$$A = P \left[ 1 + \frac{R}{R} \right]^{T}$$

- $=8000\left[1+\frac{5}{100}\right]^3$
- $= 8000(1.05)^3$
- $= 8,000 \times 1.05 \times 1.05 \times 1.05$
- = 9,261

#### **Ouestion5**

If in two years' time a principal of Rs. 100 amounts to Rs. 121 when the interest at the rate of r% is compounded annually, then the value of r will be

(a) 10.5

(b) 10%

(c) 15

(d) 14

#### **Answer: b**

# **Explanation:**

Given,

Principal (P) = Rs. 100

Amount (A) = Rs. 121

Rate R = r% p.a.

Time T = 2 year

The amount after "T" year

$$A = P \left[ 1 + \frac{R}{100} \right]^T$$

$$121 = 100 \left[ 1 + \frac{r}{100} \right]^{2}$$

$$\frac{121}{100} = \left[ 1 + \frac{r}{100} \right]^{2}$$

$$\left( \frac{11}{10} \right)^{2} = \left[ 1 + \frac{r}{100} \right]^{2}$$
On comparing

$$\frac{121}{100} = \left[1 + \frac{r}{100}\right]^2$$

$$\left(\frac{11}{10}\right)^2 = \left[1 + \frac{r}{100}\right]^2$$

On comparing

On compari  

$$\frac{11}{10} = 1 + \frac{r}{100}$$

$$\frac{11}{10} - 1 = \frac{r}{100}$$

$$\frac{1}{10} = \frac{r}{100}$$

$$r = \frac{100}{10}$$

$$r = 10\%$$

$$\frac{11}{10}$$
 - 1 =  $\frac{r}{100}$ 

$$\frac{1}{10} = \frac{1}{100}$$

$$r = \frac{100}{100}$$

# **Question6**

A certain sum of money Q was deposited for 5 year and 4 months 4.5% simple interest and amounted to Rs 248, and then the value of Q is

(a) 200

(b) 210

(c) 220

(d) 240

# Answer: a

#### **Explanation:**

Principal (P) Given

R = x

T = 4.5%

= 5 years 4 month

= 5 years +  $\frac{4}{12}$  years

= 5 years +  $\frac{1}{3}$  years

 $=5\frac{1}{3}$  years

Amount after T years

A = P + S.I.

$$A = P + \frac{PRT}{100}$$

 $A = P + \frac{100}{100}$   $A = X + \frac{X \times 45 \times 16}{1000 \times 3}$   $248 = X + \frac{24X}{100}$ 

124X = 24800

 $X = \frac{24800}{124} = 200$ 

# **Ouestion7**

A man invests an amount of Rs. 15,860 in the names of his three sons A,B and C in such a way that they get the same amount after 2,3 and 4 years respectively. If the rate of interest is 5%, then the ratio of amount invested in the name of A, B and C is A.

#### Answer: a

# **Explanation:**

Total amount invested = {15,860

Amount Invested into three persons (son's) A, B, C.

Amount Invest in the Name of A = Rs. X

Amount Invest in the Name of B = Rs. Y

Amount Invest in the Name of C = Rs. Z

Then

Case - 1 For A

$$P = Rs. X, A = 5\% T = 2 years$$

(S.I.) 
$$_1 = \frac{p_1 R_1 T_1}{100} = \frac{X \times 5 \times 2}{100} = \frac{10X}{100}$$

Case – 2 for B

$$P_2 = Rs. Y, R_2 = 5\%, T_2 = 3 years$$

(S.I.) 
$$2 = \frac{P_2 R_2 T_2}{100} = \frac{Y \times 5 \times 3}{100} = \frac{15Y}{100}$$

Case - 3 for C

$$P_3 = t z$$
,  $R_3 = 5\%$ ,  $T_3 = 4 years$ 

(S. I.)<sub>3</sub> = 
$$\frac{P_3 R_3 T_3}{100}$$
 =  $\frac{Z \times 5 \times 4}{100}$  =  $\frac{20Z}{100}$ 

Given 
$$(S. I.)_1 = (S. I.)_2 = (S. I.)_3$$

$$\frac{10X}{100} = \frac{15Y}{100} = \frac{20Z}{100}$$

$$10X = 15Y = 20Z = K$$

$$10X = K$$
,  $15Y = K$ ,  $20Z = K$ 

$$X = \frac{k}{10}, y = \frac{k}{15}, z = \frac{k}{20}$$

X: y: 
$$z = \frac{k}{10}$$
:  $\frac{k}{15}$ :  $\frac{k}{20}$ 

$$X = \frac{k}{10}, y = \frac{k}{15}, z = \frac{k}{20}$$

$$X: y: z = \frac{k}{10}: \frac{k}{15}: \frac{k}{20}$$

$$\frac{1}{10}: \frac{1}{15}: \frac{1}{20} = 60 \times \frac{1}{10}: 60 \times \frac{1}{15}: 60 \times \frac{1}{20}$$

#### **Ouestion 8**

If the difference between the compound interest compounded annually and simple interest on a certain amount at 10% per annum for two years is 372, then the principal amount is

(a) 37,200

(b) 37,000

(c) 37,500

(d) None of the above

# Answer: a

# **Explanation:**

For two year C.I. - S.I. =  $P\left(\frac{R}{100}\right)^2$ 

$$372 = P\left(\frac{10}{100}\right)^2$$

$$P = \frac{372}{(0.1)^2} = \frac{372}{001} \times 100$$
$$= 37,200$$

# **Question 9**

What is the net present value of piece of property which would be valued at 2 lakh at end of 2 years? (Annual rate of increase = 5%)

(a) 1.81 lakh

(b) 2.01 lakh

(c) 2.00 lakh

(d) None of the above

# Answer: a

# **Explanation:**

Let, Present value (P) = P

A = Rs. 2,00,000

A = 5%

$$A = P \left[ 1 + \frac{R}{100} \right]^T$$

2, 00,000 = 
$$P\left[1 + \frac{5}{100}\right]^2$$

$$2,00,000 = P(1.05)^2$$

$$P = \frac{2,00,000}{(1.05)^2} = \frac{2,00,000}{1.1025}$$

- = 1, 81,405.896
- = 1.81 lakhs

#### **Question 10**

The effective rate of interest for one-year deposit corresponding to a nominal 7% rate of interest per annum convertible quarterly is:

(a) 7%

(b) 7.5%

(c) 7.4%

(d) 7.18%

#### Answer: (D)

#### **Explanation:**

Given R =  $\frac{7}{4}$ % Quarterly = 1.75%

 $T = 1 \times 4$  Quarterly

= 4 Quarterly

Effective Rate (E) =  $\left[ \left( 1 + \frac{R}{100} \right)^T - 1 \right] \times 100\%$ 

$$\left[ \left( 1 + \frac{1.75}{100} \right)^4 - 1 \right] \times 100\%$$

 $[(1+0.0175)^4-1]\times 100\%$ 

[(1.0175)<sup>4</sup>] × 100%

 $[1.07185 - 1] \times 100\%$ 

 $0.0718 \times 100\%$ 

= 7.18%

#### **Ouestion 11**

How much will Rs. 25,000 amount to in 2 years at Compound interest if the rates for the successive years are 4% and 5% per year.

(a) 27,300

(b) 27,000

(c) 27,500

(d) None

#### 6262969699

# **Explanation:**

Given principal (P) = 25000

$$R_1 = 4\%$$

$$R_2 = 5\%$$

$$T = 2$$
 years

# Amount after 'Rs' years

$$A = P \left[ 1 + \frac{R_1}{100} \right]^1 \left[ 1 + \frac{R_2}{100} \right]^1$$

$$A = P \left[ 1 + \frac{R_1}{100} \right]^1 \left[ 1 + \frac{R_2}{100} \right]^1$$

$$A = 25000 \left[ 1 + \frac{4}{100} \right]^1 \left[ 1 + \frac{5}{100} \right]^1$$

$$= 25000 \left( 1 + \frac{1}{25} \right) \left( 1 + \frac{1}{20} \right)$$

$$=25000\left(1+\frac{1}{25}\right)\left(1+\frac{1}{20}\right)$$

$$=25000\left(\frac{26}{25}\right)\times\left(\frac{21}{20}\right)$$

= 27300

### **Question 12**

Rs.8000 /- at 10% per annum interest compounded half yearly will become at the end of one year.

(a) Rs. 8800

(b) Rs. 8820

(c) Rs. 8900

(d) Rs. 9600

# **Answer: b**

# **Explanation:**

Given P = 8000, R = 
$$\frac{10}{2}$$
% = 5%, T = 1×2h.y, T = 2

$$A = P \left[ 1 + \frac{R}{100} \right]^T$$

$$= 8000 \left[ 1 + \frac{5}{100} \right]^{2}$$
$$= 8000 \left[ \frac{21}{20} \right]^{2}$$

$$=8000\left[\frac{21}{20}\right]^2$$

$$= 8000 \times \frac{21}{20} \times \frac{21}{20}$$
$$= 20 \times 21 \times 21$$

$$=20\times21\times21$$

= 8820

#### Question13

The value of furniture depreciates by 10% a year, it the present value of the furniture in an office is Rs. 21,870, calculated the value of furniture 3 year ago

(b) 35,000/-

(c) 40,000/-

(d) 50,000/-

# Answer: a

# **Explanation:**

Present value of furniture (A) = 21,870/-

Rate of Depreciation (R) = 10%

Time T = 3 year ago

Value of furniture 3 year ago = P

Scrap value after T years

$$A = P \left[ 1 - \frac{R}{100} \right]^T$$

$$21,870 = P \left[ 1 - \frac{10}{100} \right]^3$$

```
P = \frac{21,870}{0.729} = 30,000
```

# **MAY 2019**

# **Ouestion1**

A sum was invested for 3 years as per C.I and the rate of interest for first year is 9%, 2nd year is 6% and 3<sup>rd</sup> year is 3% p.a. respectively. Find the sum if the amount in three years is '550?

(a) Rs. 250

(b) Rs. 300

(c) Rs. 462.16

(d) Rs. 350

#### Answer: c

# **Explanation:**

Assuming (C) as option 1st year

 $A = P (1+i)^n$ 

 $A = 462.16(1+0.09)^2$ 

=462.16(1.09)

503.7544

2<sup>ND</sup> year

 $A = 503.75(1+0.06)^{1}$ 

=503.75(1.06)

533.975

149.99 Or 150

By taking 462.16 as our principal amount is matched as 550/-

If  $pi^2$  =Rs.96 and R = 8% compounded annually then P = -----.

(a) 14,000

(b) 15,000

(c) 16,000

(d) 17,000

#### **Answer: b**

#### **Explanation:**

 $Pi^2 = Rs.96$ 

R = 8%

 $P \times (8\%)^2 = 96$ 

 $P \times 64\% = 96$ 

 $P = \frac{96}{}$ 

64%

 $P = \frac{{}^{0.04}_{96 \times 100 \times 100}}{8 \times 6}$ 

P = 15000

#### **Question 3**

P = '5,000 R = 15% T = 
$$4\frac{1}{2}$$
 using I =  $\frac{PRT}{100}$  then I will be

(a) 3,375

(b) 3,300

(c) 3,735

(d) None of these

#### Answer: a

# **Explanation:**

 $I = \frac{PTR}{}$ 

$$= 5000 \times \frac{4.5}{\alpha} \times \frac{15}{100}$$
$$= 3375$$

#### **Question 4**

A sum of money amounts to 6,200 in 2 years and 7,400 in 3 years and as per S.I. then the principal is.

(a) 3,000

(b) 3,500

(c) 3,800

(d) None of these

# Answer: c

# **Explanation:**

$$A_2 = 6200 \rightarrow P + P \times R \times T = 6200$$
  
 $A_3 = 7400 \rightarrow P [1 + 2R] = 6200$   
 $P + P \times R \times T = 7400$   
 $P [1 + 3R] = 7400$   
 $P = 3800$ 

#### **Question 5**

The effective rate of interest does not depend upon

(a) Amount of Principal

- (b) Amount of interest
- (c) Number of Conversion periods
- (d) None of these

# Answer: a Explanation:

The Effective Rate of interest does not depend upon amount of principal

#### **Ouestion 6**

In simple interest if the principal is '2,000 and the rate and time are the Roots of the equations  $x^2 - 11x + 30 = 0$  then the simple interest is ------

(a) 500

(b) 600

(c) 700

(d) 800

#### **Answer: b**

# **Explanation:**

$$P = 2000$$

$$X^2 - 11X + 30 = 0$$

$$X^2 - 6X - 5X + 30 = 0$$

$$X[X-6]-5[X-6] = 0$$

$$(X-5) = 0$$
  $X = 5$ 

$$(X-6)=0$$
  $X=6$ 

$$R = 5 \qquad , T = 6$$

$$\frac{P \times R \times T}{100} = 2000 \times \frac{5}{100} \times 6$$

=600

#### **Ouestion7**

The certain sum of money became '692/- in 2 yrs and '800/- in 5 years then the principal Amount is ------

(a) 520

(b) 620

(c)720

(d) 820

Answer: b

#### **Explanation:**

 $2^{nd}$  year = 692,  $5^{th}$  year = 800

Taking out difference

 $5^{th}$  year  $-2^{nd}$  year = 800-692

3yr = 108

Int. for 1 year =  $\frac{108}{3}$  = 36

Now to calc. principle

 $=692-2 \times Int$ 

 $=692-2 \times 36$ 

= 692-72 = 620

# **Ouestion 8**

Determine the present value of perpetuity of Rs. 50,000 per month @ Rate of interest 12%

p.a. is -----

(a) Rs. 45,00,000

(b) 50,00,000

(c) Rs. 55,00,000

(d) 60,00,000

**Answer: b** 

# **Explanation:**

Answer is b

 $I = (r/100) \div time$ 

PVA = p/i

 $i = (12/100) \div 12 \text{ months} = 0.01$ 

PVA = 50,000/0.01 = 50,00,000

# **Ouestion 9**

A person wants to lease out a machine costing Rs. 5, 00,000 for a 10 year period. It has fixed a rental of Rs. 51,272 per annum payable annually starting from the end of first year. Suppose rate of interest is 10% per annum, compounded annually on which money can be invested. To whom this agreement is favorable?

(a) Favour for lessee

(b) Favour for lessor

(c) Not for both

(d) Can't be determined

Answer: a

#### **Explanation:**

The Calculating Present value for lease

$$A = P\left[\frac{(1+i)^{-n} - 1}{i}\right]$$

A = 21,272 
$$\left[ \frac{(1+0.1)^{-10}-1}{0.1} \right]$$
  
= 51,272  $\left[ \frac{(1.1)^{-10}-1}{0.1} \right]$ 

A = 315.044

Now by lessee total cost incurred today will be 3, 15,044 & cost of machine is 5, 00,000 So we will prefer lessee

#### **Question10**

Let a person invest a fixed sum at the end of each month in an account paying interest 12% per year compounded monthly. It the future value of this annuity after the 12<sup>th</sup>payment is Rs. 55,000 then the amount invested every month is?

(a) Rs. 4, 837

(b) Rs. 4,637

(c) Rs. 4,337

(d) Rs. 3337

#### Answer: c

#### **Explanation:**

FV = C × 
$$\left[\frac{(1+i)^n - 1}{i}\right]$$
  
55000 = C ×  $\left[\frac{(1+0.01)^{12} - 1}{0.12}\right]$   
= 4337

#### **Ouestion 11**

A machine depreciates in value each year at 10% of its previous value and the end of  $4^{th}$  year value is Rs. 131220. Find the original value:

(a) Rs. 2,00,000

(b) Rs. 2,02,000

(c) Rs. 2,01,000

(d) Rs. 2,03,000

#### Answer: a

# **Explanation:**

Let value of the machine at the start was 100. Now, depreciate the value by 10% and 5% alternatively.

100 == 10% ==> 90 ==5% == 85.5 == 10% ==> 76.96 ==5% ==> 73.10 (at the end of 4<sup>th</sup> year.)

Now, comparing,

73.10 = 146205

1 = 146205/73.10

 $100 = (146205 \times 100) / 73.10 = 2,00,006.$  (Approx).

So, value at the start = Rs. 200000

# **NOV 2019**

#### **Ouestion1**

A man invests Rs. 12,000 at 10% p.a. and another sum of money at 20% p.a. for one year. The total investment earns at 14% p.a. simple interest the total investment is:

(a) Rs 8,000

(b) Rs. 20,000

(c) Rs. 14,000

(d) Rs. 16,000

# Answer: (b)

# **Explanation:**

Let the another sum of money be x

So total investment Rs. (12,000 + x)

$$SI = \frac{P \times R \times T}{100}$$

# According to question

$$\frac{12,000\times10\times1}{100} + \frac{x\times20\times1}{100} = (12,000 + x) \times \frac{14}{100} \times 1$$

$$1,20,000 + 20x = 1,68,000 + 14x$$

6x = Rs. 48,000

X = Rs. 8.000

So total investment

= Rs. (12,000 + x)

= Rs. (12,000 + 8000)

= Rs. 20,000

#### **Question 2**

# Let the two rates of interest be r<sub>1</sub>%, r<sub>2</sub>%

(a) 0.4

(b) 4

(c) 0.004

(d) 18

# Answer: (a)

# **Explanation:**

$$SI = \frac{P \times R \times T}{100}$$

According to question

$$(SI)_1 - (SI)_2 = 18$$

$$1500 \times \frac{r_1}{(100)} \times 3 - 1500 \times \frac{r_2}{(100)} \times 3 = 8$$

$$\frac{4500}{(100)}(r_1-r_2)=18$$

$$(r_1 - r_2) = 0.4$$

So, the difference in their rates is 0.4.

# **Ouestion3**

# Find the effective rate of interest on payable half yearly at 5% p.a.

(a) 5.06%

(b) 4%

(c) 0.4%

(d) 3%

# Answer: (a)

# **Explanation:**

Here, R = 5% T = 1 yr

Since interest is payable half yearly

$$R = \frac{5}{2}\%$$
 and  $T = 1 \times 2 = 2$  Year

$$= \left[ \left( 1 + \frac{R}{100} \right)^T - 1 \right] \times 100$$

$$= \left[ \left( 1 + \frac{5}{2 \times 100} \right)^2 - 1 \right] \times 100$$

$$= [(1.025)^2 - 1] \times 100$$

- = [0.050625] × 100
- = 5.0625%
- = 5.06% (Approx.)

#### **Ouestion 4**

# Find the effective rate of interest at 10% p.a. when interest is payable quarterly.

(a) 10.38%

(b) 5%

(c) 5.04%

(d) 4%

# Answer: (a)

# **Explanation:**

Here; R = 10% T = 1 year

Since interest is payable quarterly

$$R = \frac{10\%}{4} T = 1 \times 4 \text{ years}$$

$$= \left[ \left( 1 + \frac{r}{100} \right)^T - 1 \right] \times 100$$

$$= \left[ \left( 1 + \frac{10}{4 \times 100} \right)^4 - 1 \right] \times 100$$

- $= [(1.025)^4 1] \times 100$
- = 10.38%

#### **Question 5**

What will be the population after 3 years when present populations is Rs. 25,000 and populations increase at the rate of 3% in 1 year, at 4% in II year, and at 5% in III year?

(a) Rs. 28,119

(b) Rs. 29,118

(c) Rs. 27,000

(d) Rs. 30,000

# Answer: (a)

# **Explanation:**

When population increase at the rate of  $r_1\%$  in  $1^{st}$  year,  $r_2\,\%$  in  $II^{nd}$  year and  $r_3\%$  in  $III^{rd}$  year.

Population after' years is given by

A = P 
$$\left(1 + \frac{r_1}{100}\right) \left(1 + \frac{r_2}{100}\right) \left(1 + \frac{r_3}{100}\right)$$

Here, P = 25,000

$$r_1 = 3\%$$
,  $r_2 = 4\%$   $r_3 = 5\%$ 

Population after 3 years = 25,000 
$$(1+\frac{r}{100})(1+\frac{r}{100})(1+\frac{r}{100})$$

# **Question6**

The value of scooter is Rs. 10,000 find its value after 7 years if rate of depreciation is 10% p.a.

(a) 4,782.96

(b) 4,278.69

(c) 42,079

(d) 42,000

# Answer: a

# **Explanation:**

We know

$$A = P\left(1 - \frac{R}{100}\right)^{T}$$
Where A scrap

Where, A scrap value

P Present value

R Rate of depreciation

T time

Here P = 10,000, R = 10%, T = 7 years

$$A = 10,000 \left(1 - \frac{10}{100}\right)^7$$

A = 4782.96

So value of scooter is 4782.96 after 7 years

### **Question 7**

**SI = 0.125P at 10% p.a. Find time.** 

(a) 1.25 years

(b) 25 years

(c) 0.25 years

(d) None

Answer: (a)

# **Explanation:**

We know,

$$SI = \frac{p \times R \times T}{100}$$

Here, SI = 0.125P R = 10%

Put these values in the above formula

$$0.125 \text{ P} = P \times \frac{10}{100} \times T$$

$$T = \frac{0.125P \times 100}{10 \times P}$$

$$= 10 \times 0.125$$

T = 1.25 Years

# **Question 8**

Scrap value of a machine valued at 10, 00,000, after 10 years within depreciation at 10% p.a.?

(a) 348678.44

(b) 33,84,679.45

(c) 4,00,000

(d) 3,00,000

# Answer: (a)

# **Explanation:**

We Know,

$$A = P \left( 1 - \frac{R}{100} \right)^T$$

Where A => Scrap value after't' years.

P => Present value R => Rate of depreciation

Here, P = Rs. 10, 00,000, R = 10%, T = 10 Years

A = 10,00,000 
$$\left(1 - \frac{10}{100}\right)^{10}$$
 = 348678.44

So value of machine after 10 year will be 348678.44

# **Ouestion 9**

The difference between CI and SI for 2 years is 21. If rate of Interest 5% find principal

(a) Rs. 8400

(b) Rs.4800

(c) Rs. 8,000

(d) Rs. 8,200

# Answer:(a)

**Explanation:** 

CI = P 
$$\left[ \left( 1 + \frac{R}{100} \right)^T - 1 \right] \qquad \text{SI} = \frac{P \times R \times T}{100}$$
CI = P 
$$\left[ \left( 1 + \frac{R}{100} \right)^2 - 1 \right] \qquad \text{SI} = \frac{P \times 5 \times 2}{100}$$

$$SI = \frac{P \times R \times T}{100}$$

$$SI = \frac{P \times 5 \times 2}{100}$$

CI = P |1.1025 - 1|

CI = P (0.1025)

21= 0.0025 P

 $P = Rs. \frac{21}{0.0025} = Rs. 8400$ 

So principal is 8400

# **Question 10**

Present value of a scooter is Rs. 7,290 if its value decreases every year by 10% then its value before 3 years is equal to:

(a) 10,000

(b) 10,500

(c) 20,000

(d) 20,500

# Answer:(a) **Explanation:**

Let the value of the scooter be Rs. X before 3 years

Before three years, A (scrap value after 3 year) = Rs. 7,290

R = 10% (dep rate)

T = 3 years

$$A = P \left( 1 - \frac{R}{100} \right)^T$$

$$7,290 = P \left( 1 - \frac{R}{100} \right)^3$$

P = Rs. 10.000

# **DEC 2020**

# **Ouestion 1**

On what sum will the compound interest at 5% p.a for 2 years compounded annually be Rs.3, 280?

(a) Rs. 16,000

(b) Rs. 32,000 (d) Rs. 64,000

(c) Rs. 48,000

# Answer: b

**Explanation:** Let the sum be Rs. X

We Know that:

We know that:  

$$= P \left( 1 + \frac{R}{100} \right)^n - P$$

$$= P \left( 1 + \frac{R}{100} \right)^n - 1$$

$$3280 = x \left[ \left( 1 + \frac{R}{100} \right)^n - 1 \right]$$

$$3280 = x \left[ 1.05^2 - 1 \right]$$

$$x = \frac{3280}{0.1025}$$
$$x = 32,000$$

#### **Question 2**

What sum of money will produce Rs.42, 800 as an interest in 3 years and 3 months at 2.5% p.a simple interest?

(a) Rs.3,78,000

(b) Rs.5,26,769

(c) Rs.4,22,000

(d) Rs.2,24,000

# **Answer: b**

# **Explanation:**

We know I=P×it

$$42,800 = P \times \frac{2.5}{100} \times 3\frac{3}{12}$$

$$P = 5, 26,769$$

# **Question 3**

An amount P becomes Rs.5, 100.5 and Rs.5,203 after second and fourth years respectively, at r% of interest per annum compounded annually. Thus, values of P and r are

(a) Rs.5,000 and 1

(b) Rs.4,000 and 1.5

(c) Rs.6,000 and 2

(c) Rs.5,500 and 3

#### Answer: a

# **Explanation:**

By option a

5000 as P & 1% = r

For 2 year

5000 +1%+1% = 5100.5

For 4 year

5000+1%+1%+1%+1%=5203

#### **Question 4**

A certain sum invested at 4% per annum compounded semi-annually amounts to Rs.1,

# 20,000 at the end of one year. Find the sum

(a) 1,10,120

(b) 1,15,340

(c) 1,12,812

(d) 1,13,113

### **Answer: b**

# **Explanation:**

An= 1,20,000

 $n=2\times1=2$ 

 $i = 4 \times 1/2\% = 2\% = 0.02$ 

P(in Rs) = ?

We have  $An = P(1+0.02)^2$ 

 $1,20,000 = P(1.02)^2$ 

=1,15,340

# **Question 5**

Rs. 2,500 is paid every year for 10 years to pay off a loan. What is the loan amount if interest rate be 14% per annum compounded annually?

(a) 13,040.27

(b) 15,847.90

(c) 14,674.21

(d) 16,345.11

#### Answer: a

# **Explanation:**

V=A.P. (n, i)

Here A=Rs.25,00

n=10

i=0.14

V=2,500×P (10,0.14)

=2,500×5.21611=Rs. 13,040.27

Therefore the loan amount is RS. 13.040.27

# **Question 6**

The ratio of principal and the compound interest value for three years (compounded annually) is 216: 127. The rate of interest is

(a) 0.1567

(b) 0.1777

(c) 0.1667

(d) 0.1588

#### Answer: c

#### **Explanation:**

Le the principal be P, then

Compound interest, CI:

$$\frac{p}{CI} = \frac{216}{127}$$

$$\Rightarrow CI = \frac{127}{216}P$$

$$CI = P \left[ 1 + \frac{R}{100} \right]^{T} - P$$

$$\Rightarrow \frac{127}{216}P = P\left[1 + \frac{R}{100}\right]^3 - P$$

$$\Rightarrow \frac{127}{216} = \left(1 + \frac{R}{100}\right)^3 - 1$$

- $\Rightarrow \frac{127}{216} + 1 = \left(1 + \frac{R}{100}\right)^3$
- $\Rightarrow \frac{343}{216} = \left(1 + \frac{R}{100}\right)^3$
- $\rightarrow 1 + \frac{R}{100} = \left(\frac{343}{216}\right)^{\frac{1}{3}}$
- $\rightarrow$  1 +  $\frac{R}{100} = \frac{7}{6}$
- $\frac{R}{100} = \frac{7}{6} 1$
- →  $R = \frac{1}{6} \times 100$
- $\rightarrow$  R = 16.67% = 0.1667

Hence, 16.67% (Option C) is correct.

# **Ouestion 7**

Find the present value of Rs.1, 00,000 be required after 5 years if the rate of interest is 9% given that (1.09)5 = 1.5386

(a) 78,995.98

(b) 64,994.20

(c) 88,992.43

(d) 93,902.12

**Answer: b** 

**Explanation:** 

Here i = 0.09 = 9%

n=5

 $A_n = 10,000$ 

Required present value =  $\frac{A_n}{(1+i)^n}$ 

1,00,000  $=\frac{1}{(1+0.09)^5}$ 

Rs. 64,994.20

# **Question 8**

Suppose you deposit Rs.900 per month into an account that pays 14.8% interest compounded monthly. How much money will you get after 9 months?

(a) Rs. 8,511

(b) Rs. 9,000

(c) Rs. 9,200

(d) Rs. 1,000

Answer: a

**Explanation:** 

Here, P = Rs. 900 , R= 14.8% and T =  $\frac{9}{12}$  =  $\frac{3}{4}$ 

$$A = P \left( 1 + \frac{R}{100} \right)^{3/4}$$

$$A = P\left(1 + \frac{14.8}{100}\right)^{3/4}$$

A = 8,511

# **Ouestion 9**

An amount is lent at a nominal rate of 4.5% per annum compounded quarterly. What would be the gain in rupees over when compounded annually?

(a) 0.56

(b) 0.45

(c) 0.76

(d) 0.85

#### Answer: c

# **Explanation:**

Let the principal be Rs. 1 and rate is 4.5% per annum

Compounded Annually:-

$$A = P \left( 1 + \frac{r}{100} \right)^n$$

Compounded Quarterly:-

$$A = P \left( 1 + \frac{r}{100} \right)^{4n}$$

$$A = 1\left(1 + \frac{4.5}{100}\right)^{1} = \frac{104.5}{100} = 1.04500$$

A = 
$$1\left(1 + \frac{4.5}{100}\right)^1 = \frac{104.5}{100} = 1.04500$$
  
A =  $1\left(1 + \frac{4.5}{100}\right)^4 = \frac{104.5}{100} = 1.04500$ 

Gain = 0.00076

Now, gain for Rs. 1 = 0.00076

Gain for Rs. 1000 = 0.76

# **Question 10**

Determine the present value of perpetuity Rs.10 per month for infinite period at an effective rate of interest of 14% p.a.?

(a) Rs.657

(b) Rs.757

(c) Rs.857

(d) Rs.957

#### Answer: c

# **Explanation:**

$$i = \frac{(r/100)}{T}$$

$$PVA = \frac{10}{0.01166}$$

$$i = \frac{(14/100)}{12}$$

$$= 857$$

#### **Ouestion 11**

# Which of the following statement is true?

- annuity due
- (a) F.V of ordinary annuity < F.V of (b) F.V of ordinary annuity > F.V of annuity due
- (c) P.V of ordinary annuity > P.V of (d) None of these annuity due

# Answer: a

# **Explanation:**

F.V of ordinary annuity < F.V of annuity due

# **IAN 2021**

#### **Question 1**

A certain sum amounted to Rs. 575 at 5% in a tie which Rs. 750 amounted to Rs. 840 at 4% if the rate of interest is simple, find the sum.

(a) Rs. 525

(b) Rs. 550 (d) Rs. 500

(c) Rs. 515 **Answer: d** 

**Explanation:** 

Time = 
$$\frac{90 \times 100}{750 \times 4}$$
 = 3 year  
Sum =  $\frac{100 \times A}{100 + rt}$   
 $\frac{100 \times 575}{100 + 3 \times 5}$  = 500

There is a direct relationship between the principal and the amount and is given by SUM = (100\*Amount)/(100+rt)

#### **Ouestion 2**

Find the amount of compound interest, if an amount of Rs. 50,000 is deposited in a bank for one year at the rate of 8% per annum compounded semiannually.

(a) Rs. 3,080

(b) Rs. 4,080

(c) Rs. 5,456

(d) Rs. 7,856

# Answer: b Explanation:

It is given that

Principal (P) = 50000

Rate of interest (r) = 8% p.a. = 4% semi-annually

Period (n)= $\frac{1}{2}$  years = 2 semi-annually

We know that

Amount =  $P(1+r/100)^n$ 

Substituting the values

 $=50000(1+4/100)^2$ 

By further calculation

 $=50000(26/25)^2$ 

 $=50000 \times \frac{26}{25} \times \frac{26}{25}$ 

= 54,080

Here

Compound interest = A - P

Substituting the values

= 54,080-50000

=4.080

#### **Ouestion 3**

The population of a town increases by 2% of the population of the beginning of that year. The number of years by which the total increase in population would be 40% is

(a) 7 years

(b) 10 years

(c) 17 years (approx.)

(d) 19 years (approx...)

Answer: c Explanation:

lets assume that the initial population was P

now after a year population will be

$$= P \left[ 1 + \frac{2}{100} \right]$$

=P(102/100)

=1.02P

Similarly after 2 years population will be

=1.02 x 1.02 x P

So after n number of years population will be

 $=P \times (1.02^n)$ 

now this population should be equal to P+40%P, so

 $1.4P=P \times (1.02^n)$ 

1.4=1.02n

1.02<sup>17</sup>=1.02<sup>n</sup>

so n=17

that means after 17 years the total increase in the population will be 40% of that of initial population.

#### **Question 4**

Find the future value of annuity of Rs. 1,000 made annually for 7 years at interest rate of 14% compounded annually [Given that  $1.14^7 = 2.5023$ )

(a) Rs. 10,730.7

(b) Rs. 5,365.35

(c) Rs. 8,756

(d) Rs. 9,892.34

Answer: a Explanation:

Annual Payment A= Rs. 1000

n= 7

i = 14% = 0.14

A(7, 0.14) = 1000 
$$\left[\frac{(1+1.014)^7 - 1}{0.14}\right] = 10,730.7$$

#### **Ouestion 5**

Two equal amounts of money an deposited in two banks each at 15% p.a. fix 3.5 years in the bank and fix 5 years in the either. The difference between the interest amounts from the banks in Rs. 144 find the sum.

(a) Rs. 620

(b) Rs. 640

(c) Rs. 820

(d) Rs. 840

Answer: b

**Explanation:** 

$$\frac{144 \times 100}{(5 - 3.5) \times 15} = 640$$

#### **Question 6**

The simple Interest on a sum at 4% p.a. for two years is Rs. 80. Find the compound interest on the same sum for the same period.

(a) Rs. 81.6

(b) Rs. 80.8

(c) Rs. 83.2

(d) Rs. 82.3

Answer: a

**Explanation:** 

 $SI = \frac{PTR}{100} = \frac{80 \times 100}{8} = 1000$ 

In CI with rate of interest = 4% and time = 2 years

Amount =  $1000 \times \frac{104}{100} \times \frac{104}{100} = 1081.6$ 

CI = A - P = 1081.6 - 1000 = 81.6

#### **Question 7**

Which is a better investment 9% p.a. compounded quarterly or 9.1% p.a. simple interest?

(a) 9% compounded

(b) 9.1% S.I

(c) Both are same

(d) Cannot be said

**Answer: a Explanation:** 

The better investment in the sense of more interest will be 9.0% compounded quarterly.

The formulas are

1. Future value = Principal x  $(1 + i)^t$  when the interest is compounded annually, and investment will be multiplied by  $(1 + I)^t$ , but in this case, t = 1, so the multiplier will be 1 + .0925 = 1.0925.

**Question8** 

The effective rate of interest corresponding to nominal rate of 7% p.a. compounded quarterly is.

(a) 7.5%

(b) 7.6%

(c) 7.7%

(d) 7.18%

**Answer: d Explanation:** 

r = 7% p.a i.e 1.75% per quarter (7/4).

So  $1+\text{reff} = (1.0175)^4 = 1.071859$ 

implies reff = 7.1859

**Question 9** 

Assuming that the discount rate is 7% p.a. how much would you pay to receive Rs. 200, growing at 5% annually forever?

(a) Rs. 2,500

(b) Rs. 5,000

(c) Rs. 7,500

(d) Rs. 10,000

Answer: d

**Explanation:** 

$$\frac{200}{0.07 - 0.05} = \frac{200}{0.02} = 10,000$$

#### **Question 10**

A man invested one-third of his capital at 7% one-fourth at 8% and the remainder at 10% if the annual income is Rs. 5610, the capital is

(a) Rs. 4,400

(b) Rs. 5,500

(c) Rs. 6,600

(d) Rs. 5,800

Answer: c

**Explanation:** 

Let the total capital be x. Then

$$\left(\frac{x}{3} \times \frac{7}{100} \times 1\right) + \left(\frac{x}{4} \times \frac{8}{100} \times 1\right) + \left(\frac{5x}{12} \times \frac{10}{100} \times 1\right) = 5610$$

$$= \frac{7x}{300} + \frac{x}{50} + \frac{x}{24} = 5610$$

$$= 51x = (5610 \times 600)$$

$$X = \left(\frac{5610 \times 600}{51}\right)$$

#### **Ouestion 11**

A sum of money is lent at compound interest rate 20% p.a. two years. It would fetch Rs. 482 more if the interest is compounded half-yearly. Then the sum is.

(a) Rs. 19,800

(b) Rs. 19,900

(c) Rs. 20,000

(d) Rs. 20,100

#### Answer: c Explanation:

Let the sum of money lent out be Rs. x

In the 1st case:

$$A_1 = Rs \ x \left( 1 + \frac{20}{100} \right)^2 = Rs. \frac{36x}{25} \ \therefore A = P \left( 1 + \frac{r}{100} \right)^n$$

$$A_2 = Rs \ x \left( 1 + \frac{20}{100 \times 2} \right)^{2 \times 2} = Rs. \frac{14641x}{10000} \ \therefore A = P \left( 1 + \frac{r}{2 \times 100} \right)^{n \times 2}$$
 (half yearly)

According to the question

$$\frac{14641x}{10000} - \frac{36x}{25} = 482$$

$$= \frac{14641x - 14400x}{10000} = 482$$

$$= 241x = 4820000$$

$$= x = 20000$$

∴The sum of money lent out = Rs.20,000

#### **Question 12**

Rs. 800 is invested at the end of each month in an account paying interest 5% per year compounded monthly. What is the future value of his annually after tenth payment? (Given that  $1.005^{10} = 1.0511$ )

(a) Rs. 4,444

(b) Rs. 8,756

(c) Rs. 3,491

(d) Rs. 8,176

## Answer: d **Explanation**:

A = Rs. 800

n= 10

$$i = 5\%$$
p.a. =  $5/12 = \frac{5}{1200} \rightarrow 0.00416$ 

Future value of annuity after 10 months is given by

$$A(n,i) = A\left[\frac{1+i)^n - 1}{i}\right]$$

A (10,0.4167)= 800 
$$\left[\frac{1+0.00416)^{10}-1}{0.00416}\right]$$

= Rs. 8.176

#### **Question 13**

When 'i' denote the actual rate of interest in decimal, and n denote the number of conversion periods, the formula for computing the effective rate of interest E is given by.

(a) 
$$(1+i)^n$$

(b) 
$$(1+i)^n - 1$$

(c) 
$$1 - (1+i)^n$$

(d) 
$$(1+i)^{-n}$$

**Answer: b Explanation:** 

$$(1+i)^n - 1$$

#### **Ouestion 14**

The present value of an Annuity immediate is the same as

- (a) Annuity regular for (n 1) years plus the initial receipt in the beginning of the period.
- (b) Annuity regular for (n-1) years initial receipt in the beginning of the period.
- (c) Annuity regular for (n + 1) years.
- (d) Annuity regular for (n + 1) years plus the initial receipt in the beginning of the period.

# Answer: a Explanation:

Annuity regular for (n-1) years plus the initial receipt in the beginning of the period.

## **IULY 2021**

#### **Ouestion 1**

A sum of ₹7500 amounts to ₹9075 at 10% p.a., interest being compounded yearly in a certain time. The simple interest (in ₹) on the same sum for the same time and the same rate is

(a) 1000

(b) 1250

(c) 1800

(d) 1500

## **Answer: Options (d)**

Assuming throw trick

7500 + 10% + 10% = 9075

Means 7500 took 2 years to be 9075

$$\frac{7500 \times 2 \times 10}{100} = 1500$$

#### **Question 2**

A loan of  $\mathbb{T}$  1, 02,000 is to be paid back in two equal annual instalments. If the rate of interest is 4% p.a., compounded annually, then the total interest charged (in  $\mathbb{T}$ ) under this instalment plan is

(a) 6160

(b) 8120

(c) 5980

(d) 7560

#### **Answer: Options (a)**

First let's call every instalment

 $(1.04) \div = 4 \text{ GT} \div = 1,02,000 = \text{ each instalment is } 54,080$ 

2 Instalments is  $54,080 \times 2 = 1,08,160$ 

Net Instalment Paid = 1,08,160 - 1,02,000 = 6160

#### **Ouestion 3**

If the desired future value after 5 years with 18% interest rate is  $\sqrt[3]{1,50,000}$ , then the present value (in  $\sqrt[3]{1}$ ) is (Given that  $(1.18)^5 = 2.2877$ )

(a) 63,712

(b) 65,568

(c) 53,712

(d) 41,712

**Answer: Options (b)** 

65,568 + 18% + 18% + 18% + 18% + 18% = 1,50,000 (approx.)

**Question 23** 

What is the Compound interest (in  $\P$ ) on a sum of  $\P$  12,600 for 1  $\frac{1}{2}$  years at 20% per annum if the interest is compounded half yearly? (Nearest to a Rupee)

(a) 4271

(b) 4171

(c) 4711

(d) 4117

**Answer: Options (b)** 

**Explanation:** 

Given

$$P = 12600$$

$$n = 1^{1}_{2}$$
 Years = 3 Years

$$r = \frac{20^2}{2} = 10 \%$$

We know that

$$A = P \left( 1 + \frac{r}{100} \right)^n$$

$$= 12,600 \left(1 + \frac{10}{100}\right)^3$$

$$= 12,600 \times \frac{11}{10} \times \frac{11}{10} \times \frac{11}{10}$$

$$= 126 \times \frac{1331}{10}$$

$$=\frac{167706}{10}$$

A = 16770.6

Now,

$$CI = A - P$$

#### **Question 4**

A sum of  $\P$  x amounts to  $\P$  27,900 in 3 years and to  $\P$  41,850 in 6 years at a certain rate percent per annum, when the interest is compounded yearly. The value of is

(a) 16080

(b) 18600

(c) 18060

(d) 16800

**Answer: Options (b)** 

**Explanation:** 

Let the principal b r x and after three years, it becomes Rs. 27,900 and after 6 years it becomes 41,850

$$\Rightarrow \frac{27,900}{x} = \frac{41,850}{27,900}$$

$$X = \frac{27,900 \times 27,900}{41,850}$$

$$\rightarrow$$
 X = 18600

#### **Question 5**

If the normal rate of growth is 17% and inflation is 9% for the five years. Let P be the Gross Domestic Product (GPD) amount at the present year then the projected real GDP after 6 years

(a) 1.587 P

(b) 1.921 P

(c) 1.403 P

(d) 2.15 P

#### **Answer: Options (a)**

## **Explanation:**

Growth is 17% Inflation is 9%

Net Growth = 8%

Taking P = 100, T = 6 year, R = 8%

100 + 8% + 8% + 8% + 8% + 8% + 8% = 158.687

1.587 P = 100

 $1.587 \times 100 = 158.7$  (Approx.)

#### **Question 6**

If a person bought a house by paying ₹ 45,00,000 down payment and ₹ 80,000 at the end of each year till the perpetuity assuming the rate of interest as 16%, the present value of house (in ₹) is given as

(a) 47,00,000

(b) 45,00,000

(c) 57,80,000

(d) 50,00,000

## **Answer: Options (d)**

80,000

 $\frac{1}{0.16}$  = [Perpetuity Firmula]

= 5, 00,000 is to be deposited today 45,00,000 + 5,00,000 = 50,00,000

#### **Ouestion 7**

Let the operating profit of a manufacturer for five years given as:

bet the operating profit of a manufacturer for five years given as:									
Year	1	2	3	4	5	6			
Operating profit {in lakh ₹}	90	100	106.4	107.14	120.24	157.35			

Then the operating profit of Compound Annual Growth Rate (CAGR) for year 6 with respect to years 2 is given at

(a) 9%

(b) 12%

(c) 11%

(d) 13%

#### **Answer: Options (b)**

For CAGR we use very easy CI formula

90 + 12% + 12% + 12% + 12% 12% = 158.61

(Approx. 15.7)

#### **Ouestion 8**

If discount rate is 14% per annum, then how much a company has to pay to receive ₹280 growing at 9% annually forever.

(a) ₹ 5,600

(b) ₹ 2,800

(c) ₹ 1,400

(d) ₹ 4,200

**Answer: Options (a)** 

$$\frac{R}{i-g} = \frac{280}{0.14 - 0.09} = \frac{280}{0.05} = 5600$$

#### **Ouestion 9**

The effective rate of return for 24% per annum convertible monthly is given as

(a) 24%

(b) 26.82%

(c) 18%

(d) 24.24%

**Answer: Options (b)** 

**ER from Tricks** 

#### **Ouestion 10**

If the cost of capital be 12% per annum, then the net present value (in nearest₹) from the given cash flow is given as

Year	1	2	3	4
Operating profit				
{in thousand ₹}	(100)	60	40	50

- (a) 31048
- (b) 34185
- (c) 51048

(d) 24187

Note: Correct Ans. is Rs. 21,048/- by taking the nearest value option D is preferable Answer: Options (d)

## Ouestion 11

A certain sum amounts to ₹ 15748 in 3 years at simple interest at r% p.a. The same sum amounts to ₹ 16,510 at (r+2) % p.a. simple interest in the same time. What is the value of r?

(a) 10%

(b) 8%

(c) 12%

(d) 6%

**Answer: Options (b)** 

#### **Question 12**

What is difference (in ₹) between the simple interest and the compound interest on a sum of  $\frac{2}{5}$  8,000 for  $2\frac{2}{5}$  years at the rate of 10% p.a., when the interest is compounded yearly?

(a) 135.75

(b) 129.50

(c) 151.75

(d) 147.20

**Answer: Options (d)** 

#### **Question 13**

The future value of annuity of  $\stackrel{?}{\stackrel{?}{?}}$  2,000 for 5 years at 5% compounded annually is given (in nearest  $\stackrel{?}{\stackrel{?}{?}}$ ) as

(a) 51051

(b) 02021

(c) 15624

(d) 61254

Note: Correct Ans is Rs. 11,051/- by taking the nearest value option C is Preferable

**Answer: Options (c)** 

## **DEC 2021**

#### **Ouestion 1**

Mr. X wants to accumulate Rs. 50,000 at the end of 10 years. Then how much amount is required to invested every year if interest is compounded annually at 10%? (Given that P(10,0.10) = 15.9374298)

(b) 4,13,726.87

(d) 4,53,726.87

#### Answer: a

#### **Explanation:**

Given FVAR = Rs 50,00,000; t= 10 years; i= 0.10; NOCPPY= 1; A=?

$$FVAR = A \left[ \frac{\left(1 + \frac{i}{NOCPPY}\right)^{tx \ NOCPPY} - 1}{\frac{i}{NOCPPY}} \right]$$

$$\mathbf{A} = \left[ \frac{\left(1 + \frac{FVAR}{NOCPPY}\right)^{tx \ NOCPPY} - 1}{\frac{i}{NOCPPY}} \right]$$

$$A \frac{50,00,000}{\left[\frac{\left(1+\frac{0.10}{1}\right)^{10\times1}-1}{\frac{0.10}{1}}\right]}$$

$$A = \frac{50,00,000}{15,9374298} = 3,13,726.87$$

#### **Question 2**

Rahul invested Rs 70,000 in a bank at the rate of 6.5% p.a. simple interest rate. He received Rs.85,925 after the end of term. Find out the period for which sum was invested by Rahul.

(a) 2 years

(b) 3 years

(c) 3.5 yeras

(d) 2.5 years

#### Answer: c

## **Explanation:**

Here, Principle (P) = 70,000

Rate (R) 6.5% p.a.

Amount (A) = 85,925, T= ?

S.I. A-P

= 85,925 - 70,000

= 15,925

 $T = \frac{S.I. \times 100}{P \times R} = \frac{15,925 \times 1000}{7000 \times 6.5}$ 

=3.5 year.

#### **Ouestion 3**

A company needs Rs. 10,000 in five years to replace as equipment. How much (inRs) should be invested now at an interest rate of 8% p.a. is order to provide for this equipment?

(a) 6000

(b) 6805

(c) 10,000

(d) 11000

#### **Answer:**

## **Explanation:**

We have A= Rs10,000; t = 5 years; i= 0.08; NOCPPY = 1; P=?

$$A = P\left(1 + \frac{i}{NOCPPY}\right)^{t \times NOCPPY}$$

$$P = \left[ \frac{A}{\left(1 + \frac{i}{NOCPPY}\right)^{t \times NOCPPY}} \right]$$

$$= \left[ \frac{10,000}{\left(1 + \frac{0.08}{1}\right)^{5 \times 1}} \right] = 6,805$$

#### **Question 4**

R needs money to pay Rs. 5,00,000 in 10 years. He invested a sum in a scheme at 9% rate of interest compounded half yearly. How much amount he invested? (1.046 $^{20}$  = 2.41171)

(a) 3,07,321

(b) 2,70,321

(c) 2,07,321

(d) 3,40,321

#### Answer: c

## **Explanation:**

$$A = P\left(1 + \frac{I}{NOCPPY}\right)^{t \times NOCPPY}$$

$$= P = \frac{5,00,000}{\left(1 + \frac{0.09}{2}\right)^{10 \times 2}}$$

$$= P = \frac{5,00,000}{(1.045)^{20}}$$

$$=P = \frac{5,00,000}{3,41171}$$

$$=P=2,07,321$$

## **Question 5**

An amount is lent at R% simple interest for R years and the simple interest amount was one-fourth of the principal amount. Then R is \_\_\_\_\_\_

(a) 5

(b) 6

(c) 5 ½

(d) 6 ½

## Answer: a

## **Explanation:**

We know that I = Pot

Given:  $I = \frac{P}{4}$ ;  $i = \frac{R}{100}$ ; t = R

$$I = Pit$$

$$\frac{P}{4} = P \times \frac{R}{100} \times R$$

$$\frac{1}{4} = \frac{R^2}{100}$$

$$100 = 4R^2$$

$$R^2 = \frac{100}{4} = 25$$

$$R = \sqrt{25} = 5$$

### **Question 6**

A sum of money is put at 20% compound interest rate p.a. At which year the aggregated amount just exceeds the double of the original sum?

(a) 6

(c) 4

#### Answer: c

**Explanation:** 

i=0.20; P=100; NOCPPY= 1; t=?

$$A = P \left( 1 + \frac{I}{NOCPPY} \right)^{t \times NOCPPY}$$

Try the options.

Option (a) - 6

$$A = 100\left(1 + \frac{0.20}{1}\right)^{6 \times 1} = 298.5894$$

Option (b) – 5

$$A = 100 \left(1 + \frac{0.20}{1}\right)^{5 \times 1} = 248.832$$

Option (c) – 4

$$A=100\left(1+\frac{0.20}{1}\right)^{4\times1}=207.36$$

Option (d) -3

$$A = 100 \left(1 + \frac{0.20}{1}\right)^{3 \times 1} = 172.8$$

Therefore, option (c) is the answer.

#### **Ouestion 7**

The present value of an annuity of Rs. 25,000 to be received after 10 years at 6% per annum

## compounded annually is Rs \_\_\_\_\_.

 $(1.06^5 = 1.33823)$ 

(a) Rs. 15,960

(b)Rs. 13,960

(c) Rs. 11,960

(d) Rs. 17,960

#### **Answer: b**

## **Explanation:**

The language of this question is wrong. The word "annuity" should not have been there. Also, the given information  $(1.06^5 = 1.33823)$  is of no use.

$$P = \frac{A}{\left(1 + \frac{A}{NOCPPY}\right)^{t \times NOCPPY}}$$

$$P = \frac{25,000}{\left(1 + \frac{0.06}{1}\right)^{10 \times 1}}$$

$$= P = 13,959.87 = 13,960$$

## **IUNE 2022**

#### **Ouestion 1**

₹ 2500 is paid every year for 10 years to pay off a loan. What is the loan amount if interest rate be 14% per annum compounded annually?

(a) ₹ 15,841.90

(b) ₹ 13,040.27

(c) ₹ 14,674.21

(d) ₹ 14,010.90

## Answer: Options (a)

## **Explanation:**

Annuity (A) = 2,500

n = 10yrs.

R = 14%

$$I = \frac{R}{100} = \frac{14}{100} = 0.14$$

Present value

Present value
$$V = \frac{A}{i} \left[ \frac{(1+i)^n - 1}{(1+0.14)^n} \right]$$

$$= \frac{2,500}{0.14} \left[ \frac{(1+0.14)^{10} - 1}{(1+0.14)^{10}} \right]$$

$$= \frac{2,500}{0.14} \left[ \frac{(1.14)^{10} - 1}{(1.14)^{10}} \right]$$

$$= \frac{2,500}{0.14} \left[ \frac{3.707221 - 1}{3.707221} \right]$$

$$= \frac{2,500}{0.14} \times \frac{2.70721}{3.707221}$$

#### **Question 2**

= 13,040.27

₹ 200 is invested at the end of each month in an account paying interest 6% per year compounded monthly. What is the future value of this annuity after 10<sup>th</sup> payment?

(a) ₹ 2,044

(b) ₹ 12,044

#### (c) ₹ 2,040

(d) ₹ 12,000

#### **Answer: Options (a)**

#### **Explanation:**

Given Annuity (A) = ₹ 200 n = 10, R = 6% p.a.  $i = \frac{6}{12}$ % per month i = 0.005

Future value A(n, i) = 
$$\frac{A}{i}[(1+i)^n] - 1$$
  
=  $\frac{200}{0.005}[(1+0.005)^{10}] - 1$   
=  $\frac{200}{0.005}[1.0511] - 1$   
=  $200 \times 10.22$   
= ₹ 2,044

#### **Question 3**

In How much time a sum of amount doubles at simple interest at 12.5% rate?

(a) 7 year

(b) 8 year

(c) 9 year

(d) 10 year

#### **Answer: Options (b)**

#### **Explanation:**

Let Principal (P) = 100

- (A) = 200
- (R) = 12.5%

T = ?

- S.I = A P
- =200-100
- = 100

(Time) 
$$T = \frac{S.I \times 100}{P \times R} = \frac{100 \times 1000}{100 \times 12.5} = 8 \text{ years}$$

## **Question 4**

Anshika took a loan of  $\mathbb{Z}$  1,00,000 @ 8% for 5 years. What amount will she pay if she wants to pay the whole amount in five equal instalments?

(a) ₹ 25,405.63

(b) ₹ 26,045.68

(c) ₹ 28,045.50

(d) None

**Answer: Options (a)** 

#### **Explanation:**

V = 10000

$$R = 8\%$$

$$i = \frac{8}{100} = 0.08$$

$$A = ?, n = 5$$

**Present Value** 

$$V = \frac{A}{i} \left[ \frac{(1+i)^n - 1}{(1+i)^n} \right]$$

$$100000 = \frac{A}{0.08} \left[ \frac{(1+0.08)^5 - 1}{(1+0.08)^5} \right]$$

#### For enquiry -6262969604

#### 6262969699

$$100000 \times 0.08 = A \left[ \frac{(1.08)^5 - 1}{(1.08)^5} \right]$$

$$8000 = \frac{A \times 0.469328}{1.469328}$$

$$8000 = A \times 0.319417$$

$$8000 = \frac{8000}{0.319417}$$

$$= 25,045.63$$

#### **Question 5**

Ankit invests ₹ 3,000 at the end of each quarter receiving interest @7% per annum for 5 years. What amount will be receive at the end of the period?

(a) ₹ 71,200.20

(b) ₹ 71,104.83

(c) ₹ 7.,204.83

(d) None

**Answer: Options (b)** 

**Explanation:** 

Given Annuity (A) = 3000  $R = \frac{7}{4}\% = 1.75\%$   $I = \frac{R}{100} = \frac{1.75}{100} = 0.0175$  n = 5 years  $= 5 \times 4 \text{ Quarter}$  = 20 QuarterFuture Value  $A_{(n, i)}$   $= \frac{A}{i}[(1+i)^n - 1]$   $= \frac{3000}{0.0175}[(1+0.0175)^{20} - 1]$   $= \frac{3000}{0.0175}[(1.0175)^{20} - 1]$ 

= 71,104.83

#### **Question 6**

The effective rate of interest corresponding a normal rate of 7% p.a. convertible quarterly.

(a) 7%

(b) 7.5%

(c) 5%

(d) 7.18%

**Answer: Options (d)** 

**Explanation:** 

In interest is paid Quarterly

$$R = \frac{7}{4}\% = 1.75\%$$

T = 1 years =  $1 \times 4$  Quarterly

= 4 Quarterly

**Effective Rate** 

E = 
$$\left[ \left( 1 + \frac{R}{100} \right)^T - 1 \right] \times 100$$
  
=  $\left[ \left( 1 + \frac{1.75}{100} \right)^4 - 1 \right] \times 100$   
=  $\left[ (1 + 0.0175)^4 - 1 \right] \times 100$   
=  $\left[ (1.0175)^4 - 1 \right] \times 100$   
=  $\left[ 1.0781 - 1 \right] \times 100$   
=  $0.0781 \times 100$   
=  $7.18\%$ 

#### **Ouestion 7**

Assuming that the discount rate is 7% p.a. How much would pay to receive ₹ 200, rowing at 5% annually for ever?

(a) ₹ 2500

(b) ₹ 5000

(c) ₹ 7,500

(d) ₹ 10000

#### **Answer: Options (d)**

#### **Explanation:**

Discount rate (i) = 
$$7\%$$
 p.a =  $0.07$ 

growing rate (g) = 
$$5\%$$
 annually =  $0.05$ 

$$(R) = ₹200$$

Present value of growing perpetuity

$$PVA = \frac{R}{i-g}$$

$$= \frac{200}{0.07 - 0.05}$$

$$= \frac{200}{002}$$

$$= 10000$$

#### **Question 8**

A company establishes a sinking fund to provide for the payment ₹ 2,00,000 debt maturity in 20 years contribution to the fund are to be made at the end of every year. Find amount of each deposit of interest is 10% per annum?

(a) ₹ 3,592.11

(b) ₹ 3,492.11

(c) ₹ 3,392.11

(d) None

## **Answer: Options (b)**

## **Explanation:**

$$A_{(n,i)} = 2,00,000$$

$$R = 10\%$$
,  $i = \frac{10}{100} = 0.1$ 

$$A_{(n,i)} = \frac{A}{i}[(1+i)^n - 1]$$

$$200000 = \frac{A}{0.1}[(1+0.1)^{20}-1]$$

$$200000 \times 0.1 = A [(1.1)^{20} - 1]$$

$$20000 = A [6.7275 - 1]$$

$$20000 = A \times 5.7275$$

$$A = \frac{20000}{5.7275},$$

$$A = 3492.11$$

#### **Question 9**

The CAGR of initial value of a investment of ₹ 15,000 and final value of ₹ 25,000 in 3 years is:

(a) 19%

(b) 18.56%

(c) 17.56%

(d) 17%

## **Answer: Options (b)**

## **Explanation:**

Initial value ( $V_{t0}$ ) = 15000

Final Value  $(V_{tn}) = 25000$ 

$$T_n - t_o = 3$$

#### For enquiry -6262969604

#### 6262969699

CAGR (0, 3) = 
$$\left[ \left( \frac{v_{tn}}{v_{t0}} \right)^{\frac{1}{tn-t0}} - 1 \right] \times 100$$
  
=  $\left[ \left( \frac{25000}{15000} \right)^{\frac{1}{3}} - 1 \right] \times 100$   
=  $\left[ \left( \frac{5}{3} \right)^{\frac{1}{3}} - 1 \right] \times 100$   
=  $\left[ (1.66)^{1/3} - 1 \right] \times 100$   
=  $\left[ (1.856 - 1) \times 100$   
=  $0.1856 \times 100 = 18.56$ 

#### **Ouestion 10**

ABC Ltd. wants to lease out na asset costing 3, 60,000 for a five year period. It has a fixed rental of 1, 05,000, per annum payable annually starting from the end of first year. Suppose rate of interest is 14% per annum compounded annually on which money can be invested by the company. Is this agreement favourable to the company?

(a) Yes

(b) No

(c) It depends

(d) None of the above

**Answer: Options (a)** 

**Explanation:** 

Given, A = 105000, n = 5, =  $\frac{14}{100}$  = 0.14

**Present Value** 

V = A.P(n,i)

 $= 105000 \times P(5,0.14)$ 

 $= 105000 \times 3.43308$ 

= 360473.40

Which is greater than the initial cost of the asset (360000) and leasing is favourable and Preferable.

## **DEC 2022**

#### **Ouestion 1**

A machine worth Rs. 4, 90,740 is depreciated at 15% on its opening value each year. When its value would reduce to Rs. 2, 00,000?

a) 5 years 5 months

b) 5 years 6 months

c) 5 years 7 months

d) 5 years 8 months

**Answer: Options (b)** 

**Explanation:** 

Initial price = 490740

Final= 2,00,000

After 1 year= 490740  $\left(1 - \frac{15}{100}\right)$ 

Opening Value of 2<sup>nd</sup> year

After n year =  $490740 \left(1 - \frac{15}{100}\right)^n - 200000$ 

 $=490740\times\left(\frac{17}{20}\right)^n-200000$ 

 $0.85^{\rm n} = \frac{200000}{490740}$ 

#### For enquiry -6262969604

#### 6262969699

 $0.85^{\rm n} = 0.407$ n Log 0.85 = Log 0.407 $n = \frac{\text{Log } 0.407}{\text{Log } 0.85}$ n = 5.5318

n = 5 Years 6 months

#### **Ouestion 2**

If Rs. 64 Amount to Rs. 83.20 in 2 years, what will Rs. 86 Amount to in 4 years at the same Rate percent per annum?

- a) Rs. 137.60
- c) Rs. 145.34

- b) Rs. 147.60
- d) Rs. 117.60

**Answer: Options (b)** 

**Explanation:** 

 $P_{1}=Rs.64A_{1}=83T_{1}=2$ 

Let Rate be R.

$$A = P\left(1 + \frac{RT}{100}\right)$$

$$83.2 = 64\left(1 + \frac{21}{100}\right)$$

$$83.2 = 64\left(1 + \frac{2R}{100}\right)$$
$$\frac{83.2}{64} = 1 + \frac{2R}{100}$$

$$\frac{1}{64} = 1 + \frac{1}{100}$$

Rate = 15%

Now,

 $P_2 = 86$ 

 $T_2 = 86$ 

R= 15%

$$A = P\left(1 + \frac{RT}{100}\right)$$

A= P $\left(1 + \frac{RT}{100}\right)$ A= 86 $\left(1 + \frac{15 \times 4}{100}\right)$ 

A= 137.60

## **Question 3**

Raju invests Rs. 20,000 every year in a deposit scheme staring from today for next 12 years. Assuming that interest rate on this deposit is 7% per annum compounded annually. What will be the future value of this annuity? Given that  $(1 + 0.07)^{12} = 2.25219159$ .

a) Rs. 540,526

b) Rs. 382,813

c) Rs. 643,483

d) Rs. 357,769

**Answer: Options (b)** 

**Explanation:** By Trick:

$$(167) \times = =$$
 **13**  $-1 \div 0.7$ 

= Rs. 382,813

#### **Question 4**

Mr. A invested Rs. 10,000 every year for next for 3 years at the interest rate of 8 percent per annum compounded annually. What is future value of the annuity?

a) 32644

b) 32464

c) 34264

d) 36442

#### **Answer: Options (b)**

#### **Explanation:**

Step-1: Calculate future value as though it is an ordinary annuity

Future value of the annuity as if it is an ordinary annuity

- $=10,000[(1+0.08)^3-1]/0.08$
- $=10.000 \times 0.2597$
- =Rs. 2597.12

Step-2: Multiply the result by (1+i)

=32464

#### **Ouestion 5**

Mr. Prakash invested money in two schemes 'A' and 'B' offering compound interest at the rate of 8% and 9% per annum respectively. If the total amount of interest accrued through these two schemes together in two years was Rs. 4818.30 and total amount invested was Rs.

27,000. What was the amount invested in scheme 'A'?

a) Rs. 12,000

b) Rs. 12,500

c) Rs. 13,000

d) Rs. 13,500

#### **Answer: Options (a)**

#### **Explanation:**

$$Rs(27000-x)$$

$$\Rightarrow \left(x + \frac{104}{625}\right) + \frac{1881(27000 - x)}{10000} = \frac{481830}{100}$$

- $\Rightarrow$ 1664x+1881(27000-x)=48183000
- $\Rightarrow$ (1881x-1664x) =50787000 48183000

Or 217x=2604000

Or x = 12000Rs

#### **Question 6**

A sum of money invested of compound interest doubles itself in four years. In how many years it becomes 32 times of itself at the rate of compound interest.

a) 12 years

b) 16 years

c) 20 years

d) 24 years

**Answer: Options (c)** 

#### **Explanation:**

$$A = P\left(1 + \frac{R}{100}\right)^{T}$$

Explanation:  

$$A = P\left(1 + \frac{R}{100}\right)^{T}$$

$$2x = x\left(1 + \frac{R}{100}\right)^{4}$$

$$2 = \left(1 + \frac{R}{100}\right)^{4}$$

$$1 + \frac{R}{100} = 2^{1/4}$$

$$2 = \left(1 + \frac{R}{100}\right)^4$$

$$1 + \frac{R}{100} = 2^{1/4}$$

$$32x = x \left(1 + \frac{R}{100}\right)^{T}$$

$$\therefore 1 + \frac{R}{100} = 2^{1/4}$$

$$\therefore 32 = 2^{T/4}$$

$$2^5 = 2^{T/4}$$

$$5 = T/4$$

 $T = 5 \times 4$ 

#### T = 20 Years

Therefore, in 20 years the principal amount will becomes 32 times to itself.

#### **Question 7**

A farmer borrowed Rs. 3600 at the rate of 15% simple interest per Annum. At the end of 4years, he cleared this account by paying Rs. 4000 and a cow. The cost of the cow is:

a) Rs. 1000

b) Rs. 1200

c) Rs. 1550

d) Rs. 1760

**Answer: Options (d)** 

#### **Explanation:**

SI for 4 years = Rs.( 3600×15×4)/ 100=Rs.2160 Amount after 4 years = Rs. (3600+2160)= Rs. 5760

Cost of goat = Rs. (5760-4000) = Rs. 1760

### **Question 8**

How much amount is required to be invested ever year so as to accumulate Rs. 5,00,000 at the end of 12 years if interest is compounded annually at 10%? (Where A (12, 0.1) = 21.384284)

a) Rs. 23381.65

b) Rs. 24385.85

c) Rs. 26381.65

d) Rs. 28362.75

**Answer: Options (a)** 

#### **Explanation:**

By Trick:

$$(1.1) \times = = \boxed{ 13} \qquad 1 \div 0.1 \div = = 5,00,000$$

= Rs. 23381.65

#### **Question 9**

The effective annual rate of interest corresponding to a normal rate of 6% per annum payable half yearly is:

a) 6.06%

b) 6.07%

c) 6.08%

d) 6.09%

**Answer: Options (d)** 

#### **Explanation:**

Amount of Rs.100 for 1 year when compounded half yearly}

$$= \text{Rs} \left[ 100 \times \left( 1 + \frac{3}{100} \right)^2 \right] = \text{Rs.} 106.09$$

: Effective rate = (106.09 - 100)% = 6.09%

#### **Ouestion 10**

10 years ago the earning per share (EPS) of ABC Ltd. was Rs. 5 share. Its EPS for this year is Rs. 22. Compute at what rate, EPS of the company grow annually?

a) 15.97%

b) 16.77%

c) 18.64%

d) 14.79%

**Answer: Options (b)** 

#### **Explanation:**

By option b

5+ 16.77% +16.77% +16.77% +16.77% +16.77% +16.77% +16.77% +16.77% +16.77% +16.77% =

23Approx

#### So, 16.77% is answer

#### **Question 11**

The difference between compound interest and simple interest on an amount of Rs. 15,000 for 2 years is Rs. 96. What is the rate of interest per annum?

a) 9%

b) 8%

c) 11%

d) 10%

**Answer: Options (b)** 

#### **Explanation:**

$$15000 \times \left(1 + \frac{R}{100}\right)^2 - 15000 - \left(\frac{15000 \times R \times 2}{100}\right) = 96$$

$$= R = 8\%$$

#### **Question 12**

Rs. 5,000 is invested every month end in an account paying interest @ 12% per annum compounded monthly. What is the future value of this annuity just after making 11th payment?

(Given that  $(1.01)^{11}=1.1156$ )

a) Rs. 57,800

b) Rs. 56,100

c) Rs. 56,800

d) Rs. 57,100

**Answer: Options (a)** 

## **Explanation:**

A=Rs. 5000

n=11

i=12% p.a. =12/12% per month =0.010

Future value of annuity after 10 months is given by

$$A(n, i) = A\left[\frac{(1+i)^n - 1}{i}\right]$$

A(11, 0.010)=5000 
$$\left[\frac{(1+0.010)^{11}-1}{0.010}\right]$$

= Rs. 57.800

#### **Question 13**

A sum of money doubles itself in 4 years at certain compound interest rate. In how many years this sum will becomes 8 times at same compound interest rate?

a) 12 years

b) 14 years

c) 16 years

d) 18 years

**Answer: Options (a)** 

$$A = P\left(1 + \frac{R}{100}\right)^2$$

$$2x = x\left(1 + \frac{R}{100}\right)^2$$

$$\left(1 + \frac{R}{100}\right) = 2^{1/4}$$

$$8x = x \left(1 + \frac{R}{100}\right)^{2}$$
$$\left(1 + \frac{R}{100}\right) = 2^{1/4}$$

$$\left(1 + \frac{R}{100}\right) = 2^{1/4}$$

$$8x = 2^{t/4}$$

T/4 = 3 T= 12 Years

#### **Question 14**

#### Sinking fund factor is the reciprocal of:

- a) Present value interest factor of a single cash flow
- c) Future value interest factor of an annuity
- b) Present value interest factor of an annuity
- d) Factor value interest factor of a single cash flow

#### **Answer: Options (b)**

#### **Explanation:**

The present value interest factor of an annuity is used to calculate the present value of a series of future annuities
